

PART 3

DESCRIPTIONS OF THE COURSES

Contents Part 3

ISS-1102	States, Societies and the Politics of Development	55
ISS-1103	An Overview of Modern Economic Thought	56
ISS-1104	Politics, Power and Development.....	57
ISS-1106	Introduction to Economics	58
ISS-1107	Development Economics.....	59
ISS-1110	Contemporary Social Theory.....	60
ISS-1112	Structure and Social Action: Communities, Markets and Politics	61
ISS-2101	The Making of Development: Histories, Theories and Practices	62
ISS-3103	Regression and Data Analysis	63
ISS-3105	Research Paper Preparation.....	64
ISS-3201	Mixed Methods for Social Development Research.....	66
ISS-3203	Topics in Regression Analysis.....	67
ISS-3207	Qualitative Interviewing	68
ISS-3209	Techniques for Understanding Quantitative Secondary Data.....	69
ISS-3210	Discourse Analysis and Interpretive Research.....	70
ISS-3303	Ethnographic Research and Reflexivity in Development Contexts.....	71
ISS-3305	Techniques for Case-study Research	72
ISS-3306	Participatory Action Research	73
ISS-4140	Political Economy/Ecology of Agriculture and Environment	74
ISS-4141	Foundations of Economic Development.....	76
ISS-4142	Development Policies and Practice: Interests, Conflicts and Cooperation	78
ISS-4143	Contemporary Perspectives on Social Justice	80
ISS-4144	Critical Social Policy for Transformative Development.....	82
ISS-4201	Local Governance and Community Developments	84
ISS-4202	Poverty, Gender and Social Protection: Debates, Policies and Transformative Interventions.....	85
ISS-4209	Policy Analysis and Design	86
ISS-4211	Promotion of Local Economic Development.....	87
ISS-4212	Contemporary Capitalism and Governance: Neo Liberalism and Beyond.....	88
ISS-4216	Human Rights, Law and Society	89
ISS-4217	Governance, Conflict Analysis and Conflict Management.....	90
ISS-4218	Children and Youth Studies in Development Context.....	91
ISS-4226	Feminist Theories and Strategies for Development: Global and Local Perspectives	92
ISS-4227	Securitisation of Development: Violence, Humanitarianism and Peace	93
ISS-4228	Population, People and Resources: Generations and Regeneration	94
ISS-4229	Global Environmental Politics.....	95
ISS-4231	Growth, Inequality and Poverty	96
ISS-4233	Global Economy.....	97
ISS-4237	Global Food Politics	98
ISS-4238	People on the Move: Migration, Globalisation and Livelihood	99
ISS-4270	Migration and Development: Globalisation, Livelihoods and Conflicts	100
ISS-4303	Realizing Rights and Social Justice.....	101
ISS-4307	Politics of Global Development: Debating Liberal Internationalism	102
ISS- 4311	Children, Youth and Development: Policy and Practice	103
ISS-4312	International Financial Reform	104
ISS-4313	Violent Conflict, Media and the Politics of Representation	105
ISS-4317	Econometric Analysis of Development Policies.....	106
ISS-4334	Politics and the Economics of Natural Resource Management.....	107
ISS-4335	Politics of Agrarian Transformation	108
ISS-4338	Gender and Sexuality as 'Lenses' to Engage with Development Policy and Practice	109
ISS-4339	Development Management and Reforms.....	110
ISS-4341	Evaluation of Development Policy, Programmes and Projects.....	111
ISS-4344	Working Out of Poverty	112
ISS-4348	Human Behavior and Experiments in Development.....	113
ISS-4349	Social Movements and Civic Innovation.....	114
ISS-5401	Research Paper	115
ISS-8401	Internship	117
ISS-9102	Academic Skills	118
ISS-9103	Remedial Quantitative Skills for Development Studies.....	119
ISS-9104	Academic Writing Skills	120
ISS-9105	Advanced Writing Skills.....	121
ISS-9106	Information Technology Skills	122
ISS-9120	Mathematics for Economists (ECD)	123
ISS-9130	Intermediate Microeconomics for Development Economics.....	124
ISS-9150	Earth Economics: Macroeconomics and Growth in the Closed Economy	125

ISS-1102 States, Societies and the Politics of Development

Code	ISS-1102
Weight of the Course	3 ECTS
Period	TERM 1
Course Leader	Joop de Wit
Lecturers	Joop de Wit, Sylvia Bergh, t.b.a.
Teaching Methods	Participatory Lecture
Modes of Assessment	Written Exam: 100%
Course Administration	TLST

Learning objectives

At the end of the course, students will know:

- the relevance of politics to development and how political power influences the direction and outcomes of development interventions;
- key concepts and theories of the state, state-society interactions, political systems, as well as sovereignty and legitimacy;
- different forms of government (democratic, authoritarian, developmental) as well as expected roles of actors in governance and democracy such as politicians and civil society organizations and how this works out in practice;
- leading determinants and characteristics of state formation, social forces and development, including the use and abuse of state power and the (formal and informal) relations between state and non-state actors in development situations.

Course description

Politics structure the possibilities for realizing development, social justice and societal change. This course introduces students to the major manifestations of political power by locating it in the context of state-society relationships. It will enable students to analyse and communicate how development mediates power relations and structures, and how states, societies and institutions at local, national and international levels influence each other. Having completed the course the students will be able to explain the centrality of political power in development interventions, and in responses and counter-responses to these interventions.

The course is located in the field of politics of development and addresses key concepts and theories of power in relation to the actors and institutions of governance and democracy in development. This foundation course in politics furthermore introduces students to specific themes that form the foundations for the study of politics in relation to development and democracy namely:

- Classical theories of the state, state-society interactions and political systems.
- Critical introduction to broad notions of sovereignty and legal, democratic and other (traditional, charismatic) forms of legitimacy.
- Different types of political systems and government regimes, including the role of nationalism, ideology and political stability.
- The relations (both formal and informal) between the government and non-state actors such as unorganised citizens, civil society, social movements and market actors and firms.

ISS-1103 An Overview of Modern Economic Thought

Code	ISS-1103
Weight of the Course	3 ECTS
Period	TERM 1
Course Leader	Howard Nicholas
Lecturer	Howard Nicholas
Teaching Methods	Participatory Lecture, Workshop
Modes of Assessment	Written Exam: 85%, Group Assignment: 15%
Course Administration	TLST

Learning objectives

By the end of the course students should possess

1. A critical, non-technical (i.e., non-mathematical) understanding of contemporary economic thought.
2. An appreciation of fundamental differences between major schools of economic thought in economics, and the significance these differences have for their respective perspectives on policy.
3. A de-mystified view of key economic concepts and a non-jargonised view of crucial issues.

Course description

The course provides a non-mathematical introduction to how different groupings of economists view an economy and economic phenomena. That is to say, the approach adopted is a comparative one. Two broad schools of economic thought are identified: the Neo-classical and Heterodox schools. The groupings are founded on perceived shared views on; approach and method, basic building blocks of economic analysis, explanations of economic phenomena, and policy conclusions. Particular attention is paid to certain of the building blocks since these provide important foundations for many of the ensuing majors. Some of the most important of these building blocks are; the operation of product and factor markets, public goods and externalities, the concept of elasticity, the circular flow of income, and aggregate supply and demand.

The course comprises two interrelated parts. The first part is devoted to the study of so-called microeconomic phenomena, including the operation of individual product and factor markets and government policies in respect of the 'failure' of these markets. The second part is concerned with macroeconomic phenomena, including economic growth and development, inflation and the balance of payments, as well as competing policies in respect of these.

The basic philosophy underlying the teaching of the course is that there is no such thing as a single, agreed, homogenous body of economic thought that one can label as "economics", nor can economics be treated as a science in the same way as one or another of the disciplines in the physical sciences. Accordingly, students are encouraged to consider the theories they are learning about in the course critically, and with the hindsight of their own experiences.

ISS-1104 Politics, Power and Development

Code	ISS-1104
Weight of the Course	3 ECTS
Period	TERM 1
Course Leader	Karim Knio
Lecturers	Karim Knio, Jeff Handmaker, Sarah Hardus
Teaching Methods	Participatory Lecture
Modes of Assessment	Written Exam: 100%
Course Administration	TLST

Learning objectives

At the end of the course, students will have obtained a better understanding of:

- why politics matters for development and how political power influences the direction and outcomes of development interventions;
- the centrality of notions of the state to thinking about politics in and of development;
- the way in which state, society and markets interact; and
- the impact of global trends (such as 'globalization') on the state and politics.

Course description

Politics structures the possibilities for realizing development, social justice and societal change. By taking the state as reference point, the course analyses some of the most important concepts that are central to the role of politics in development processes.

Starting from classical and more recent understandings of the state, and notions of embeddedness of politics, the economy and society, the course focuses on the omnipresence of political processes in development. Topics that are discussed are the relationship between state power and the hegemony of ideas, the impact of globalization of the state, the differences among political systems and the variation in the strength of the state.

ISS-1106 Introduction to Economics

Code	ISS-1106
Weight of the Course	3 ECTS
Period	TERM 1
Course Leader	Irene van Staveren
Lecturer	Irene van Staveren
Teaching Methods	Participatory Lecture
Modes of Assessment	Written Exam (under invigilated circumstances): 100%
Course Administration	TLST

Learning objectives

After completing this course, participants should understand and be able to accurately use some key economic concepts and insights that are often used in development studies. They will also have knowledge about four key theoretical approaches in economics,. Finally, through a large number of examples from many (developing) countries, they will have a broad basic understanding of how economies worldwide operate.

Course description

This introductory course aims at an audience without training in economics, or those who need to fresh-up basic knowledge. It is a blended learning course with various online tools. These include videos with presentations by the lecturer, quiz questions, and a Facebook page with additional learning tools

The course is an introduction to economics from a pluralist and global perspective, covering both micro economics and macroeconomics. It uses a new textbook, especially written for this course by the course leader/lecturer. The book *ECONOMICS AFTER THE CRISIS – An Introduction to Economics from a Pluralist and Global Perspective*, was published in January 2015 by Routledge.

The course starts with an introduction to economics as a science, than moves to consumption and production, the household, firms, the role of the state, and labour markets,. The second part of the course introduces the complexities at the macro level with topics such as the macroeconomic flow, money and inflation, economic growth, and international trade. Every chapter will present four theoretical perspectives: social economics (which connects to sociology), institutional economics, Post Keynesian economics, and neoclassical economics (mainstream economics).

The textbook is inclusive in terms of gender, nature, and social inequalities. Most importantly, the book takes a global perspective, using many real-world examples from Europe, Asia, North America, Latin America and Africa. The course will be taught through participatory lectures, all by the same course leader/lecturer. The course will provide the opportunity to practice with previous exams and quiz questions and it includes a Q&A session with the lecturer before the exams. The lecturer will be widely available for questions, outside scheduled classes, during the whole teaching period.

Indicative readings

Staveren, I., van (2015) *Economics after the Crisis an Introduction to Economics from a Pluralist and Global Perspective*. Abingdon, Oxon, UK: Routledge.

The book is available from a variety of (online) bookstores as hardback, paperback and e-book. The ISS library has several copies of the book available. In addition, the library has a wide variety of introductory economic textbooks available as complementary readings.

ISS-1107 Development Economics

Code	ISS-1107
Weight of the Course	3 ECTS
Period	TERM 1
Course Leader	Lorenzo Pellegrini
Lecturer	Lorenzo Pellegrini
Teaching Methods	Participatory Lecture
Modes of Assessment	Written Exam: 100%
Course Administration	TLST

Learning objectives

After completion of the course, you will have knowledge about a range of economic approaches that may be used to analyse the economic transformation of those countries known as the 'developing world'. The course will help you identify the main hypotheses and processes explaining economic growth and development. It will also help you to appreciate that many issues surrounding economic development can only be understood if one moves from the global context to the internal structure of developing countries to micro-level analysis. It will identify the main hypotheses and processes explaining economic growth and development and how they relate to policy making. All participants are expected to critically assess the limitations and strengths of the theories presented and to understand the key aspects of alternative theories. After the course you should be able to related economic theory and concepts to real-life situations and specific country contexts.

Course description

This is a course in development economics for master-level students in development studies (with a particular focus on public policy). This eight lecture course will deal with five topics and will start with a broad discussion of the nature of economic development –Lecture 1. Lectures 2 and 3 will present the main elements of classic and heterodox theories of economic development. Lectures 4 & 5 will introduce students to the most prominent contemporary models of development and underdevelopment, in particular, endogenous growth theories, debates about the 'big push' and the nature and causes of low-level equilibrium (poverty) traps.

Inspired by the development constraints identified in sessions 1 to 5, each of the remaining sessions will deal with a particular development constraint. Session 6 and 7 will deal with the complex relationship between environment and development. Session 8 will discuss the problem of corruption and its relationship with economic development. Throughout the course we will discuss the policy implications issuing from the different theories in the context of real country problems. Empirical evidence in favour and against the various theories presented will feed the discussion.

Indicative readings

Agénor, P.R. and P.J. Montiel (2008) *Development Macroeconomics* (3rd edn). Princeton, NJ: Princeton University Press.

Bardhan, P.K. and C. Udry (1999) *Development Microeconomics*. Oxford: Oxford University Press.

Basu, K. (1997) *Analytical Development Economics*. Cambridge, MA: MIT Press.

Ray, D. (1998) *Development Economics*. Princeton, NJ: Princeton University Press.

Todaro, M.P. and S.C. Smith (2012) *Economic Development* (11th edn). Boston, Mass.: Addison-Wesley.

Prerequisites

Basic knowledge in Economics and Mathematics for Economists is essential to follow this course. You may refresh your knowledge in microeconomics by attending the remedial course "Intermediate Microeconomics" (9130) and the remedial course in "Macroeconomics and Growth" (9150). You can also work through the mathematical appendix in a standard economic textbook. The course is explicitly designed for students in development studies, thus it is less technical than a master-level course just for economists.

ISS-1110 Contemporary Social Theory

Code	ISS-1110
Weight of the Course	3 ECTS
Period	TERM 1
Course Leader	Nahda Shehada
Lecturers	Nahda Shehada, Dubravka Žarkov
Teaching Methods	Participatory Lectures, Tutorials, Theoretical Debates
Modes of Assessment	Take Home Essay: 100%
Course Administration	TLST

Learning objectives

By the end of the course, participants will have sufficient understanding of contemporary social theory. They will be introduced to the main theoretical debates in and about social theory and the influence of social/political context in developing various perspectives in conceptualising social reality.

Course description

This foundation course is meant to familiarize students with the latest debates in and about social theory. It focuses on some perspectives that have been most influential – and sometimes controversial – in the debate.

During your stay at ISS, you will be exposed to many different and often conflicting theoretical perspectives. This course attempts to help you situate those perspectives in the wider framework of social theory. The course will start by mapping out the analytical parameters and key contemporary theories and perspectives in the field. The course will then move on to discuss the Critical Social Theory developed by Frankfurt school/Germany during the early decades of the twentieth century. We will also discuss a different conceptualisation of power developed by one of the key thinkers of the 20th century, that is Michel Foucault. Cross-cultural differences are noticeable in the way in which new perspectives emerge. Thus, we will examine Post-colonial theory and its most influential figure, i.e. Edward Said with his 'Orientalism'. Furthermore, we will be helped by Escobar's application of the knowledge/power nexus when studying the question of Modernity-Coloniality. The course will put these thinkers from the Global South in dialogue with prominent thinkers from the critical and deconstruction tradition in Europe. The final session will be dedicated to a rather optimistic perspective developed by Boaventura de Sousa Santos, who proposes the 'ecology of knowledge' as a way out of human misery.

Indicative readings

- Abu-Lughod, L. (2013) *'Do Muslim Women Need Saving'* Cambridge, Massachusetts: Harvard University Press.
- Calhoun, Craig, Chris Rojek, and Bryan S. Turner (eds) (2005) *The Sage handbook of sociology*. London: Sage.
- Escobar, A. (2007) 'Worlds and Knowledges Otherwise', *Cultural Studies* 21(2): 179-210.

- Santos, Boaventura de Sousa (ed.) (2007) *Another Knowledge Is Possible: Beyond Northern Epistemology*. London, New York: Verso.
- Williams, P. and L. Chrisman (eds) (1993) *Colonial Discourse and Postcolonial Theory: A Reader*. London & New York: Harvester Wheatsheaf.

Key words: social theory, classical social theory, Marxism, Frankfurt school, Orientalism, Gender, postcolonial theory, ecology of knowledge

ISS-1112 Structure and Social Action: Communities, Markets and Politics

Code	ISS-1112
Weight of the Course	3 ECTS
Period	TERM 1
Course Leader	Georgina Gomez
Lecturers	Georgina Gomez, Amrita Chhachhi
Teaching Methods	Participatory Lecture, Tutorials, Workshops
Modes of Assessment	Written Exam: 100%
Course Administration	TLST

Learning objectives

Students will develop an understanding of social life as a combination of stability and change. They will become familiar with fundamental concepts in sociology and by the end of the course they will have learnt to use the concepts discussed in the course to analyse social structures and actions.

Course description

This course proposes to connect sociological theory with every day experiences. It aims to improve students' understanding of social reality by using a series of sociological concepts like structure and agency, division of labour, differentiation and cohesion, power, legitimacy, class and gender.

The course is organised in lectures by thematic groups, rather than theoretical paradigms. It reads social processes across the social, economic and political domains, an approach that follows the perspective of the classical sociologists. Max Weber, for example, titled one of his main works "*Economy and Society*" and Emile Durkheim considered the division of labour in production processes as a factor of social integration.

During the course, a number of sociological concepts will be brought to life and used to reflect on issues like why we work extra hours that we are not paid for, what entitles our leaders to command us -and we behave accordingly- or why we engage in efforts to push for social change. The course is suitable for students with no previous knowledge of sociology but with a definite interest in sociological approaches to the economy, political economy and organisations.

Indicative readings

Calhoun, C., J. Gerteis, J. Moody, S. Pfaff and I. Virk (eds) (2007) *Classical sociological theory*. (2nd edn) Oxford: Blackwell.

ISS-2101 The Making of Development: Histories, Theories and Practices

Code	ISS-2101
Weight of the Course	8 ECTS
Period	TERM 1
Course Leader	Wendy Harcourt
Lecturers	Murat Arsel, Wendy Harcourt, Roy Huijsmans, Rosalba Icaza, Karin Arts, Peter Knorringa
Teaching Methods	On-line Modules, Participatory Lectures, Group Work Workshops, Participatory Video
Modes of Assessment	Written Exam: 30%, Group Assignment: 15%, Assignment 55%
Course Administration	TLST

Learning objectives

During the course the students will acquire a critical lens through which to analyze development by being able to:

- a) Understand development as a contested set of cultural, political, economic and historical processes and relations
- b) Describe and substantiate main stream and side stream development processes and practices
- c) Identify the way 'the development problem' and its 'solutions' are understood according to different conceptual approaches to development
- d) Situate their own conceptual framework, realities, biases and opinions and experiences of development in critical approaches that prepare them to address development problems and strategies for change
- e) Work collaboratively within a multidisciplinary and multicultural context to communicate ideas orally and in writing.
- f) Engage in a critical dialogue with peers and staff

Course description

The course will be a critical introduction to theories and strategies of international development – looking at development strategies from cultural, historical, and political economic perspectives. It will build on a dialogue from the students' own experiences and knowledges of development with perspectives from the course literature in order to understand development processes, and to question and generate development alternatives. Emphasis will be on the analyses of development as an aspiration, a discourse of power and set of practices and in engaging students in different approaches to development.

The course will foster an open learning environment where students will be expected to participate actively in the course using a participatory interactive methodology in order to encourage co-learning, collaborative knowledge generation. The course will feature on-line assignments to be done before class, co-taught participatory seminars and student-led workshops.

Indicative readings

ISS-3103 Regression and Data Analysis

Code	ISS-3103
Weight of the Course	4 ECTS
Period	TERM 1
Course Leader	Natascha Wagner
Lecturer	Natascha Wagner
Teaching Methods	Lectures, Workshop, Computer Exercises, Tutorials
Modes of Assessment	Assignment (Mid-term Take Home): 40%, Final Take Home Exam: 60%
Course Administration	TLST

Learning objectives

The aim of this course is to develop the quantitative skills that students need in order to conduct empirically oriented research in development studies/economics. After completing the course students will be familiar with the theory and practice of standard regression analysis and be able to understand and critically assess empirical literature in development studies/economics. The computer workshops will be application-oriented and based on data from developed as well as developing countries. By the end of the course students should be adept at using the statistical software STATA as a tool for handling data and carrying out empirical analysis.

Course description

This course is the first block of the two-block Research Methodology package on Quantitative Research Methods. The course is self-contained while at the same time it is a prerequisite for those who want to follow 3203. This course along with 3203 is intended for students interested in quantitative development policy analysis. Specifically, this block introduces students to the basic principles of classical regression analysis and discusses modern techniques of data analysis both as supplements to standard regression analysis and as stand-alone diagnostic tools. Hands on computer workshops are designed to familiarize students with the statistical package STATA (version 13). During these workshops students will be expected to analyse macro and micro data from developing countries using the methods discussed in the lectures.

Topics to be covered include the simple two-variable linear regression model and the derivation of the ordinary least squares (OLS) estimator, extension of the simple linear model to the case of multiple regressors, assumptions of the linear regression model, goodness of fit, interval estimation, prediction and forecasting, data problems, hypothesis tests, binary variables, heteroscedasticity, binary dependent variables, and basic principles of time series analysis.

Indicative readings

The basic text for the course is:

Wooldridge, J.M. (2009) *Introductory Econometrics. A Modern Approach*, 5th edn, Australia; Mason, OH: Thompson South-Western.

You may also want to have a look at the following book that gives a presentation of regression analysis in matrix notation:

Greene, W. H. (2012) *Econometric Analysis*, (7th edn). Harlow; New York: Pearson Addison Wesley.

Alternative textbooks that may be consulted:

Gujarati, Damodar N. (2009) *Basic Econometrics*, 5th Edition, Boston: McGraw Hill.

Kmenta, Jan (1986) *Elements of Econometrics*, 2nd Edition, New York: Macmillan.

Maddala, G.S. (2001) *Introduction to Econometrics*, (3rd edn), Chichester; New York: Wiley.

Mukherjee C., H. White and M. Wuyts (1998) *Econometrics and Data Analysis for Developing Countries*, London; New York: Routledge.

Prerequisites

The course requires prior BA level knowledge of statistics. Although the course does not dwell much on mathematical derivations and proofs, students are expected to be familiar with basic algebra and calculus.

ISS-3105 Research Paper Preparation

Code	ISS-3105
Weight of the Course	4 ECTS, counted in the 27 ECTS of the Research Paper (ISS-5401)
Period	TERM 1 - TERM 3
Course Leader	Kees Biekart
Lecturers	Oane Visser, Matthias Rieger, Lee Pegler, Georgina Gomez, Kees Biekart, Avé Baxa-Rodriguez, Lidwien Lamboo, Saskia Scheffer, John Steenwinkel.
Teaching Methods	Participatory Lecture, Workshop, Computer Exercise
Modes of Assessment	Attendance: 100%, Approved RP Design
Course Administration	TLST

Learning objectives

The course is designed to support the preparation and development of good quality Research Papers, and to prepare students on the key components of writing their Research Paper. The course will also familiarize students with concepts and practices of information literacy in order to develop an active information management style.

Course description

The course begins in Term 1 (September 2016) with a plenary session for all MA students with details on the Research Paper process. At later sessions, Research Technique courses will be presented, as students have to choose these by November. In December students will hear a range of Research Paper experiences from students of the outgoing 'old batch'. As information technology is increasingly being used as a tool to create, access, and manage information, there is a need to also offer training in information technology skills. In a number of subsequent small group workshops between September and late November, practical assignments will allow students to develop their practical skills in identifying information needs, searching effectively, evaluating information found, and referencing the consulted literature correctly in scholarly writings (e.g. assignments, essays, Research Paper).

In Term 2, a series of ten RP Preparation workshops is offered to systematically develop the competences needed for the development of a Research Paper Proposal (from which supervisors and second readers can be identified), followed by the elaboration of the (more detailed) Research Paper Design. The workshops are organized per Major, covering key issues that can arise in conducting research leading to a good quality Research Paper Design. The workshops are based on the 'flipped class room' concept, in which students are provided video input and specific assignments prior to the workshops.

The workshops will address the following questions:

- What is a Research Paper and how does it connect to your other learning at ISS?
- How to move from a 'topic' to a manageable researchable question?
- How to do a literature search and what can we learn from texts produced by previous researchers?
- What is good referencing and selecting academic quotes?
- What is a theoretical framework, and why do you need theory?
- How to combine theory and data in a concrete research design?
- What principles can guide selecting cases to be investigated and assessing the accuracy and representativeness of data?
- How to format and index my Research Paper?
- What are ethical procedures and risk assessments?
- What can be expected from a Supervisor?
- How to apply 'triangulation' and/or 'mixed methods'?

The course will end in May 2017 (Term 3) with individual students presenting their Research Paper Designs in the smaller Major and/or Specialization groups during the so-called 'Research Paper Design seminars', in which their Supervisor, Second Reader and fellow students actively provide feedback. These seminars are primarily meant to improve the RP design and will be organized with sufficient time to allow revision before formal submission for assessment.

Participation in the plenaries and workshops is compulsory for all MA students.

Assessment

The revised Research Paper Design will be assessed on a pass/resubmission basis.

ISS-3201 Mixed Methods for Social Development Research

Code	ISS-3201
Weight of the Course	8 ECTS
Period	TERM 2 & 3
Course Leader	Kees Biekart and Freek Schiphorst
Lecturers	Peter van Bergeijk, Kees Biekart, Freek Schiphorst, et al.
Teaching Methods	Participatory Lectures, Computer Exercises, Workshops, Study Visits
Modes of Assessment	Assignment 1: 35%, Assignment 2: 35%, Group Assignment: 30%
Course Administration	TLST

Learning objectives

- *Overall objective:* to acquire key skills and knowledge for conducting and using development-oriented “mixed methods” social science research, both for MA work at the ISS and for professional work later, as a researcher, client, or study evaluator.

Upon completion of the course, students will be able to

- develop and apply quantitative and qualitative instruments for data collection
- choose appropriate data analysis techniques in qualitative and quantitative research and conduct such analysis
- critically assess the appropriateness of methodological choices in research.

Course description

This course seeks to provide knowledge and skills relevant for conducting development-oriented mixed methods social science research. The course will also address fundamental social science attitudes, reasoning and approaches that govern certain methodologies. The course will highlight and compare selected methods for data collection and data analysis. Although there is a slight emphasis on the techniques used in qualitative research (such as interview, focus group, survey, life history, observation, and document research), there is also explicit attention for collecting and dealing with quantitative data (questionnaire design, administration and analysis).

The course is especially attractive to students who are sensitive—or want to be sensitized—to the variety of contexts, interests and ways in which social development research is and can be implemented. After its completion, students will be well prepared to doing their field work and conducting a research project based on primary as well as secondary data.

- O’Leary, Z. (2014) *The Essential Guide to Doing Your Research Project* (2nd edition). London: Sage.

Prerequisites

Students without any background in statistics are advised to take the remedial class in quantitative skills (9103). All students must have an ECDL score for Excel of at least 75%.

ISS-3203 Topics in Regression Analysis

Code	ISS-3203
Weight of the Course	4 ECTS
Period	TERM 2
Course Leader	Arjun Bedi
Lecturer	Arjun Bedi
Teaching Methods	Participatory Lecture, Computer Exercise, Tutorial
Modes of Assessment	Assignment: 40%, Take Home Exam: 60%
Course Administration	TLST

Learning objectives

The course objectives are: (a) to deepen and broaden knowledge and understanding of material needed for empirical quantitative analysis of micro and macro data relevant to development issues; (b) to cover the theory and practice of modern econometrics at a level appropriate for postgraduates emphasizing application; (c) to teach the habits of thought, knowledge and understanding to be able to carry out good quality applied econometric research with confidence and authority; (d) to develop critical insight to appraise econometric results obtained by other researchers. The course is application oriented. Accordingly, the emphasis will be on application of techniques for policy analysis and will not be overly concerned with mathematical proofs. The course also aims to provide students with the ability to use STATA in an effective manner.

Course description

This course is the second block of the two-block Research Methodology package on Quantitative Research Methods. It builds on the material covered in 3103 and is intended for students interested in quantitative development policy analysis. The first part of the course discusses methods that are typically used to analyze survey (micro) data. Topics covered in this part of the course include estimation and inference using simultaneous equation models, instrumental variable estimation, qualitative and limited dependent variable models (probit, logit, tobit, ordered and unordered logit and probit models). The second part of the course concentrates on regression methods and issues that typically arise while using time series data. Course coverage includes detecting and testing for autocorrelation, discussion of stationary and non-stationary time-series, unit roots and cointegration.

Indicative reading

The basic text for the course is

Wooldridge, J.M. (2016) *Introductory Econometrics: A Modern Approach* (6thedn). Mason OH: Thomson South-Western, CENGAGE Learning

Prerequisites

Prior courses in statistics and knowledge of the multiple regression model are prerequisites for this course. Students should also be familiar with the effects of relaxing the assumptions of the classical normal regression model.

ISS-3207 Qualitative Interviewing

Code	ISS-3207
Weight of the Course	4 ECTS
Period	TERM 2
Course Leader	Karin Astrid Siegmann
Lecturer	Karin Astrid Siegmann
Teaching Methods	Participatory Lecture, Workshop, Computer Exercises
Modes of Assessment	Formative Assignment: 40%, Summative Assignment: 40%, Questions & Comments: 5%, Group Assignment: 15%
Course Administration	TLST

Learning objectives

Different types of interviews are an important component of qualitative research. Also, many research papers within the ISS are to some extent based on data generated through qualitative interviews. At the end of this course, participants

- will be able to reflect on the interview process in a theoretically and ethically informed manner;
- will have enhanced their skills to generate data from people through different interview techniques;
- will be able to reflect on the pros and cons of different interview techniques, and their appropriateness under different circumstances;
- will have developed some skills to report as well as to
- analyze interview data with computer support; and
- will be aware of different methodologies informing the analysis of interview data.

Course description

This course is meant for MA participants who are interested in acquiring skills in doing qualitative research, for use either as part of their MA thesis or afterwards. The course explores some theoretical dimensions of the interview process, and will discuss issues of validity and rigour in qualitative research. A large part of the course deals with practical training in doing particular kinds of interviews and reporting these. The course also includes sessions on different methodologies and methods for analysing interview data, including the use of software developed for this purpose.

Indicative reading

ISS-3209 Techniques for Understanding Quantitative Secondary Data

Code	ISS-3209
Weight of the Course	4 ECTS
Period	TERM 2
Course Leader	Mahmood Messkoub
Lecturers	Mahmood Messkoub, and staff
Teaching Methods	Participatory Lecture, Tutorial, Computer Exercises
Modes of Assessment	Assignment: 35%, Group assignment: 15%, Written Exam: 50%
Course Administration	TLST

Learning objectives

The broad objectives of the course are to:

- improve skills in working with numbers;
- improve skills to use quantitative data for research and policy analysis;
- improve skills to order, present, analyse and interpret quantitative data;
- improve the ability to construct valid evidence-based arguments as well as to assess the validity of arguments made by others;
- enhance quantitative skills required for writing the research paper.

Course description

This course is meant for MA participants with a broad interest in policy-oriented research. Although the course aims to be interesting and challenging for participants with serious research ambitions, it is also meant for participants who, in their work with either governmental agencies or non-governmental organizations, will not undertake advanced research projects themselves, but are expected to gather and analyse information, and commission and assess research work undertaken by others.

The course is structured around two blocks.

In block one students become familiar with the simple manipulation of relatively few numbers (taken from macro aggregates, social indicators, summary results from statistical analysis) to arrive at an analytically insightful sketch of a socioeconomic situation or problem. They will work with simple techniques to analyse issues like population, national income, employment and international trade from three different perspectives: (1) order of magnitude (absolute or relative), (2) structure and composition and (3) change. In the process, they will become familiar with handling scientific notation; dealing with ratios, proportions and rates; making simple guesstimates using the geometric mean of two numbers; using tables to denote structure and visual displays to look at change over time; and calculating growth rates of single (e.g. GDP) and composite (GDP per capita) variables; and handling average and marginal coefficients as well as elasticities to depict the impact, e.g., of a change in price on demand.

In block two they will learn how to download quantitative secondary data (from national sources such as census, household survey and international sources such as the World Bank, ILO, UNDP) and perform some basic analysis and presentation, using descriptive statistics, with the aim of enhancing intellectual insights into the research process and improving concrete research skills. Block two continues with an introduction to concept of probability, and theories and techniques of statistical inference (in plain language: using a sample to make an educated judgement about the underlying population, e.g. is the average height of a sample of ISS students a good estimate of the average height of the population of ISS students). A prerequisite to the course is some basic knowledge of simple spreadsheet packages like Excel and a willingness to engage with quantitative data.

ISS-3210 Discourse Analysis and Interpretive Research

Code	ISS-3210
Weight	8 ECTS
Period	TERM 2
Course Leader	Des Gasper
Lecturers	Des Gasper, Silke Heumann, Karin Astrid Siegmann
Teaching Methods	Lecture, Tutorial, Workshop
Exam	Assignment(s) 100%
Course Administration	TLST

Learning objectives

This course is for students who already have a broad basic training in social research methodology and wish to go deeper now with interpretive research, where investigation of meanings is central, with a focus on discourse analysis. Students will acquire skills to explore discourses and meaning-making – language-in-use, language-in-society, systems of meaning -- and their social and political effects and evolution. The course centrally looks at methods to study written and spoken discourse, as parts of an interpretive research process:

- to understand better the intellectual and social location of texts, and relationships between texts, worldviews and social practices; including differences of genre;
- to examine the meanings, structure, logic and adequacy of texts which propose judgements or social practices; including the subtexts that lie behind statements;
- to consider broader 'frames', 'discourse(s)' or 'narrative(s)' within or behind a text, and see how texts propose and order social relations;
- to situate discourse analysis within an overall interpretive research process.

Course description

There are many ways of studying how language is used in social and political life, each with their own focus and methods. The course highlights this variety of types of approach, and explores some that are accessible and relevant for social science students and can be used as methods of exploratory investigation, including of: the choices of vocabulary and labels, language structures, illustrations, category systems and 'cast of characters', key concepts, metaphors, argumentation and assumptions, 'frames' and inclusions/exclusions, and 'story lines'/narratives. It looks at how different versions of these methods, reflected in various types of discourse analysis, may match different theories about language, society, and language-society relations but also can fit different situations. The course considers how methods can be combined within a research project, including with other social research methods.

Indicative reading

- Yanow, D.; Schwartz-Shea, P. (2013) *Interpretation and Method – Empirical Research Methods and the Interpretive Turn*. New York & London: M.E. Sharpe. First edition 2006.

The maximum number of participants is 25. Potential students might be required to send a motivation letter to the course leader, that explains their interest in the course and their previous training &/ experience in research methodology. The course is for those who already have an adequate general exposure to research methods. It can also be taken as an Option course.

ISS-3303 Ethnographic Research and Reflexivity in Development Contexts

Code	ISS-3303
Weight of the course	4 ECTS
Period	TERM 3
Course Leader	Roy Huijsmans
Lecturer	Roy Huijsmans and guest lecturers
Teaching Methods	Participatory Lecture, Workshops, Field Exercise, Film
Modes of Assessment	-Assignments: 100%: Reflexive notes on ethnographic research exercise (45%); individual essay on ethnography in anticipated RP project (45%); participation (10%)
Course Administration	TLST

Learning objectives

The objectives of the course are three-fold. First, course participants will explore, discuss and come to understand some key epistemological debates underpinning ethnographic approaches to knowledge generation in relation to development, such as those pertaining to 'situated knowledges', 'positionality of the researcher', and debates on 'place' and 'connections'. Second, course participants will get acquainted with conducting ethnographic research (through a field exercise), and reflect on various dimensions of such practices, including participant observation, ethnographic approaches to qualitative methods, and the writing and interpretation of field notes. Third, course participants will develop an argued position on the (im)possibilities and particularities of ethnography in their own Research Paper plans, including its role, its feasibility, the researcher's (that is yours!) positionality, research ethics, and the methodological shape it may take.

Course description

The course is designed for those considering using an ethnographic research orientation (in whatever form) in their research paper and/or future career. For this purpose the course is divided into two blocks. The first block deals with a range of historical, epistemological and theoretical issues underpinning ethnography in the context of development research. In the second block the focus shifts to practice. In this block, course participants will evaluate the use of ethnography in past ISS research papers, carry out their own ethnographic research exercise and reflect on this, and think through a range of practical, methodological and ethical issues pertaining to employing an ethnographic orientation in their anticipated RP projects.

ISS-3305 Techniques for Case-study Research

Code	ISS-3305
Weight of the Course	4 ECTS
Period	TERM 3
Course Leader	Sarah Hardus
Lecturer	Sarah Hardus
Teaching Methods	Participatory Lecture, Workshop: Group Work
Modes of Assessment	(Writing) Assignment 1: 30%, (Writing) Assignment 2: 40%, Assignment 3 (Learning Journal): 30%
Course Administration	TLST

Learning objectives

Upon completion of the course, students have:

- obtained knowledge on the main reasons for doing case-study research;
- increased their ability to select the proper cases for their research project;
- enhanced their ability to apply relevant techniques within a case-study research design.

Course description

This course is designed to assist students who aim to do case studies with making choices in setting up their own research project. For this reason, the theoretical part of the course, which revolves around a set of methodological principles involved in doing case-based research, is placed in function of the application of a set of more hands-on tools and instruments.

The course is built on the awareness that there is no one single case-study method, but that case studies contain a variety of research techniques. The course places emphasis on the principles of case-study selection and the variety of case-study designs. As such, the course stresses the need for a firm grounding of case studies in social-science theory, since case studies are potentially strong tools for arriving at descriptive conclusions on causal effects.

Throughout the course, we will address methodological issues involved in doing case-study research and discuss concrete case studies drawn from the field of development studies. Students will keep a learning journal in which they describe their learning process, assess the relevance of the case study methodology for their own research interests, and explore different options of using case studies in their research projects.

The course is assessed through the learning journal (30%) and two writing assignments (70%) in which students are asked to apply the principles of case study research to case studies that they have selected themselves.

ISS-3306 Participatory Action Research

Code	ISS-3306
Weight of the Course	4 ECTS
Period	TERM 3
Course Leader	Kees Biekart
Lecturers	Kees Biekart, Rosalba Icaza
Teaching Methods	Participatory Lecture, Workshop
Modes of Assessment	Assignment: 60%, Group Assignment: 30%, Presentation: 10%
Course Administration	TLST

Learning objectives

The course offers an insight in the conceptual as well as in the practical applications of Participatory Action Research (PAR) and the politics of knowledge production and dissemination. The course objective is to develop competences and skills in carrying out participatory research techniques as well as in grasping the basic principles of Participatory Action Research.

Course description

The course examines the most recent discussions on participatory ways to conduct research in the social sciences. It looks at the various positions in the debate about participation and the politics of knowledge, the implications for methodological choices and ethical dilemmas that accompany these. The course also focuses at Participatory Action Research techniques and is very much geared towards learning particular research skills used in participatory approaches. Active involvement in group work and an emphasis on personal initiatives is a central characteristic of this course.

Three themes are central in the course: (1) power and knowledge, and the role of activists and academics in generating knowledge; (2) participation action research techniques, and how to practice and manage the various participatory data collection tools; (3) participation and empowerment, and how to make sure that research is not a disempowering enterprise, and to avoid that participatory approaches are abused by external actors.

Indicative reading

- Hickey, S. and G. Mohan (2005) 'Relocating participation within a radical politics of development', *Development and Change* 36(2): 237-262.

- Reason P. and H. Bradbury (eds) (2008) *The SAGE Handbook of Action Research: Participative Inquiry and Practice* (2nd edn). London: Sage.

The maximum number of participants is 25. If necessary, preference will be given to students who send convincing written motivation statements.

ISS-4140 Political Economy/Ecology of Agriculture and Environment

Code	ISS-4140
Weight of the Course	12 ECTS
Period	TERM 1
Course Leaders	Jun Borrás and Murat Arsel
Lecturers	Murat Arsel, Jun Borrás, Julien-Francois Gerber, Cristobal Kay, Mindi Schneider, Oane Visser and Ben White
Teaching Methods	Participatory Lecture, Workshop, Study Visits
Modes of Assessment	Assignment: 45%, Written Exam: 45%, Group Assignment: 10%
Course Administration	TLST

Learning objectives

After the course, students will have:

- A grasp of major theoretical and methodological traditions in AFES, seen in overlapping/synergistic or conflicting/competing manner
- A conceptual framework which recognizes that all agrarian, food and environmental issues arise from a combination of economic, political, cultural and natural processes;
- A critical perspective on the political and economic structures that shape local, national and international agrarian, food and environmental questions.
- An overview of relevant contemporary issues surrounding agriculture, the environment and their interactions;

Course description

This course introduces students to the inter-linked theoretical and methodological foundations of critical agrarian studies and critical environmental studies. Participants will become familiar with the necessary theoretical and analytical tools required to develop a critical understanding of contemporary process of agrarian and environmental change, including environmental degradation, rural resource access and use, and the key socio-political and economic processes facing the rural world. Key themes and theories in Agrarian, Food and Environmental Studies will be introduced and examined.

This course does not take the rural world in isolation, but rather in an interlinked manner: rural-urban and agricultural-industry linkages get considerable attention. Appropriate comparisons will be made between developing and developed countries.

The analytical starting point to tackle the various issues is a 'critical political-economy' framework, meaning that the emphasis will be on the political-economic power dynamics that frame and cut across agrarian and environmental issues.

ISS-4141 Foundations of Economic Development

Code	ISS-4141
Weight of the Course	12 ECTS
Period	TERM 1
Course Leader	Natascha Wagner
Lecturers	Mansoor Murshed, Natascha Wagner
Teaching Methods	Participatory Lecture, Workshop
Modes of Assessment	Mid-term Written Exam: 50%, Final Written Exam: 50%
Course Administration	TLST

Learning objectives

On completing the course students should be able to:

- Understand the conduct of macro and microeconomic policy in developing countries.
- Relate economic theory to empirical applications and tests
- Critically assess and discuss micro and macroeconomic theories of development, and communicate this assessment effectively.

Course description

This course is aimed at giving students a thorough knowledge of the key theoretical and policy debates in development macro- and micro-economics.

The first block deals with the economic analysis of households, firms and institutions. The students will be introduced to current debates and research in the microeconomics of development and examine the role of market imperfections, market failure and non-market institutions in shaping decisions. The block is broadly conceived and will draw on material from neoclassical economics, institutional economics, and behavioural/experimental economics. Current research in this area blends theoretical models and empirical application and both types of work will be presented. The block will deal with three topics and will begin by applying economic analysis to understand the behaviour of rural households. Various models of the household will be analysed and household decision-making will be discussed. This will be followed by an analysis of the constraints faced by small and micro firms in developing countries and a review of micro-finance and social capital. The final bit of the micro block will study the role of institutions and the state in driving economic development, and in particular will scrutinise corruption as an institutional failure.

The block on development macroeconomics will attempt to address theoretical policy issues for macroeconomics in developing countries. The focus will be on the open economy macroeconomic paradigm. Issues addressed will include fiscal and monetary policies, budget deficits and inflation, the competitive consequences of natural resource booms via the exchange rate (Dutch Disease) and the credibility of currency pegs and fixed exchange rate regimes. Finally, the block will introduce students to theories that explain economic growth, which are important for poverty reduction and the exercise of human capabilities. Students will have a clear understanding of the conduct of macroeconomic policy in developing countries, which aims to promote stability, growth and the acquisition or maintenance of international competitiveness. They will also learn formal paradigms of macroeconomic policy. Furthermore, students will develop a good understanding of the processes and competing theories underlying economic growth, including the convergence/ divergence in average income levels between rich and poor countries over time.

ISS-4142 Development Policies and Practice: Interests, Conflicts and Cooperation

Code	ISS-4142
Weight of the Course	12 ECTS
Period	TERM 1
Course Leader	Erhard Berner
Lecturers	Erhard Berner, Peter Knorringa, Joop de Wit
Teaching Methods	Participatory Lectures, Simulation, Case study, Workshop, Tutorial
Modes of Assessment	Assignment: 40%, Written Exam: 50%, Group Presentation 10%
Course Administration	TLST

Learning Objectives

This course will prepare students to engage in the contemporary debates on development policy and multi-stakeholder governance by thinking more logically and critically about development policy structures, actors and processes. After completing the course students will be able to analyse the interests, behavior and relationships of different actors in local, national and international governance and policy and the institutions within which their actions are embedded. In particular, they will be able to:

1. develop and employ analytical frameworks for understanding the ideas, interests and motives of the main actors in development processes, as involved in the formulation and implementation of policies and programmes;
2. analyse the relations between organizations and associations as expressions of private and collective interests and actions within economy and society, and government as an expression of the state seeking cooperation and cooptation of stakeholders;
3. analyse and assess the functioning and evolution of governance structures and outcomes with respect to their underlying power structures;
4. understand how to facilitate/promote constructive interactions.
- 5.

Course Description

This course introduces the student to the multi-actor and multi-level processes that underpin development policy and governance. It examines the roles, strategies and instruments of governments, the private sector, and non-government and community organizations. The course first explores the theoretical and analytic foundations of institutions and the political economy of policy making. It introduces the student to the core concepts of and methodological approaches to multi-stakeholder governance. The course then engages with policymaking with attention to legislative and administrative processes, the politics within these processes and the different political and administrative structures that exist in developing countries. Similarly, the course examines the role of private sector and civil society actors in development processes to understand how different groups engage and contribute and how organizations and interests affect governance and policymaking. Finally, the course provides an overview of methods and approaches linked to the interactions between development actors in governance and policy arenas.

ISS-4143 Contemporary Perspectives on Social Justice

Code	ISS-4143
Weight of the Course	12 ECTS
Period	TERM 1
Course Leaders	Nahda Shehada & Dubravka Žarkov
Lecturers	Karin Arts, Kees Biekart, Amrita Chhachhi, Jeff Handmaker, Silke Heumann, Helen Hintjens, Rosalba Icaza Garza, Rachel Kurian, Nahda Shehada, Dubravka Žarkov
Teaching Methods	Participatory Lectures, Workshops, Group Presentations, Study Visit
Modes of Assessment	Take Home Exam (Mid-term): 45%, Assignment (Essay): 40%, Group Assignment: 15%
Course Administration	TLST

Learning objectives

After following the course, students have gained a critical understanding of:

- the relationship between production of knowledge and the social, political and historical dynamics within which this production takes place;
- key theoretical perspectives on social justice in general, and specifically from the perspectives of gender, human rights and violent conflict;

Students will also acquire a specific analytical tool (mapping tool) and the skills how to use it, by which they will be able to:

- analyse contemporary economic, political, social and symbolic struggles around issues of social justice in general, and those related to gender, human rights, violent conflict and social movements in particular;
- distinguish, compare and assess theoretical and strategic possibilities of different social justice policies, frameworks, actions and movements in the context of globalization.

Course description

The starting assumption of this course is that meanings of justice are neither self-evident, nor fixed. Rather, they are embedded in specific worldviews, and thus remain a contested terrain both theoretically, and in practice.

The first block of the course is, therefore, dedicated to the understanding of production of knowledge in general, and about social justice in particular. This first block takes students through some of the key theoretical and strategic paradigms within which social justice has been debated and defined – from classical to (neo-) liberal and critical constructivist – linking perspectives on social justice with perspectives on power, agency and social change. This block also introduces gender, violent conflict, human rights and social movements as particular fields of study for which issues of social justice are central.

The second block situates social justice struggles within contemporary global society, exploring contemporary processes of globalization as the setting within which relations of power operate, social inequalities, exploitation and marginalization take place, and struggles for economic, political and symbolic justice are organized. Links are made with the gendered dynamics of inequality, exploitation and violence. Central to this block are geo-political contestations and contemporary wars, the processes of globalization and evolution of human rights ideas and normative frameworks, and the role of social movements in defense of social justice.

ISS-4144 Critical Social Policy for Transformative Development

Code	ISS-4144
Weight of the Course	12 ECTS
Period	TERM 1b
Course Leader	Roy Huijsmans
Deputy Course Leader	Wendy Harcourt
Lecturers	Amrita Chhachhi, Wendy Harcourt, Roy Huijsmans, Charmaine Ramos, and other SPD faculty
Teaching Methods	Lectures, Participatory Lectures, Presentations, Workshops, Study visits
Modes of Assessment	Written Exam (Mid-term): 45%, Individual Assignments (End of Term): 40%, Group assignment 15%
Course Administration	TLST

Learning objectives

After the course, students will have developed:

- A grasp of major theoretical and methodological traditions and approaches in the field of social policy as applied to questions of development, particularly from critical political economy and post-structural perspectives.
- An understanding of interdisciplinary conceptual frameworks of social policy centred on the challenges of social reproduction and social provisioning through an intersectional lens addressing issues of social security, education, health and work in the context of contemporary globalisation.
- A critical understanding of the role of social policy in relation to poverty, inequality and the structuring of citizenship, including its gendered and generational dimensions.
- An understanding of the role of and relation between various actors and forces in social development such as the state, the market, households, as well as Inter- and Non-Governmental Organisations.
- An ability to communicate their ideas to specialist and wider audiences and to participate with confidence in debates, research and analysis in the field of social policy and development.

Course description

Social policy is concerned with the principle institutional processes by which rights and entitlements are defined and/or practiced in a society, particularly through critical institutions such as education, health and social security systems. The core course of the Social Policy for Development Major provides a foundation for examining these processes within development as rooted in the problems of social reproduction and social provisioning through an intersectional lens. Particular attention is given to the gender, demographic, generational, ethnic/race and class-differentiated nature of these problems; to poverty, inequality, and work and employment; and to issues of distributive justice, power and the financing of social policies. The course grounds the idea of social policy historically whilst also placing social policy for development in the broader context of contemporary globalization. Social policies are understood to either reproduce and entrench inequalities, or else transform them towards greater inclusion.

The course is divided into two blocks. The first block introduces key perspectives in the field of social policy and foundational concepts, such as needs, well-being, capabilities and citizenship for social policy analysis in relation to development, and is closed with a mid-course exam. The second block takes a thematic approach and deepens these perspectives and concepts in relation to a number of key social policy debates and sectors. Block 2 closes with a group assignment that functions as a springboard for the individual assignment due at the end of term 1b.

ISS-4201 Local Governance and Community Developments

Code	ISS-4201
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Georgina M. Gómez
Lecturers	Georgina M. Gómez, Erhard Berner, tba
Teaching Methods	Participatory Lectures, Study visits, tutorials, workshops
Modes of Assessment	Take home assignments: 50%; group presentation 10%; final essay 40%
Course Administration	TLST

Learning objectives

The course will enable students to engage with bottom-up development processes. At the end of the course participants will have gained knowledge to

- understand from a conceptual and analytical point of view the impacts of globalization and urbanization on the local context;
- have a grasp of the international trend towards decentralization and the opportunities and constraints that it creates for managing territories locally;
- identify and analyze localised economic activities of income-generation, competitiveness, marginalisation, resistance and selective integration;
- Analyze the general possibilities and limitations that globalization offers for the diversity and institutionalisation of local practices, income generation and livelihoods;
- Engage in critical discussion on contentious issues around glocalisation and selective inclusion

Course description

The course focuses on three lines of global-local interaction in three integrated blocks. The first block discusses the much discussed process of globalisation that permeate every aspect of socio-economic life and is often perceived as the cause for the loss of cultural identities and the uniqueness of local economies. The second block examines decentralisation processes as critical for localities to gain autonomy, improve public service delivery, and engage in partnerships with other actors at the local level. The third block looks into the local socio-economic systems and its resources, livelihoods, informal activities, and collective actions to integrate global economic flows.

The course follows the connections between the macro level of globalization, the meso level of institutions and localities, and the micro aspects of agents and their organisations. It explores the processes by which local actors, communities and institutions are integrated into the “global”, and the possibilities and limits for protecting local practices. The course is interdisciplinary and draws on economic, sociological, political and anthropological perspectives.

ISS-4202 Poverty, Gender and Social Protection: Debates, Policies and Transformative Interventions

Code	ISS-4202
Weight of the course	8 ECTS
Period	TERM 2
Course Leader	Erhard Berner, Amrita Chhachhi
Lecturer	Erhard Berner, Amrita Chhachhi
Teaching Methods	Participatory Lecture, Workshop, Tutorial
Modes of Assessment	Assignment: 45%, Written Exam: 45%, Group Presentation 10%
Course Administration	TLST

Learning objectives

Students will be able to:

- apply new gendered conceptualizations of poverty, vulnerability and social exclusion, and analyse the multidimensional manifestations of poverty and impoverishment;
- analyse and assess debates on the state versus the market in relation to systems of social provisioning and protection, and critically evaluate gendered/class/ethnic/caste outcomes;
- develop an in-depth understanding of the design, potentialities and limits of current poverty reduction schemes and programmes at macro, meso and micro levels;
- identify alternative strategies, policy interventions and innovative subaltern responses aimed at eliminating poverty on the basis of principles of gender justice and social and economic equity.

Course description

This course examines debates, policies and interventions aiming at poverty reduction. It provides an interdisciplinary and multi-dimensional gendered poverty lens to assess the experience of poverty/vulnerability/social exclusion and programs of social protection and poverty reduction such as corporate social responsibility, micro-credit, safety net programs, conditional and unconditional cash transfers, public employment schemes, housing/land rights, and slum upgrading. It provides a standpoint to address asymmetry in access to resources and the care economy, the opportunity for voice and 'citizenship in practice', and other aspects crucial to well-being such as self-respect, dignity, empowerment and participation. By linking issues of redistribution of resources with issues of recognition of multiple identities, subjectivity and agency, the course will enable students to conceptualize and apply an intersectional approach to social, economic and gender justice .

ISS-4209 Policy Analysis and Design

Code	ISS-4209
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Sunil Tankha
Lecturers	Des Gasper, Sunil Tankha
Teaching Methods	Participatory Lecture, Workshop
Modes of Assessment	Assignment 1 (Policy Report): 25%, Assignment 2 (Policy Memo): 10%, (Final) Paper: 40%, Presentation: 15%, Group Assignment: 10%
	A minimum of 80% attendance is mandatory for receiving a passing grade
Course Administration	TLST

Learning objectives

To increase your capacity to contribute in identifying, analysing and assessing policy problems and options, and to understand roles of and limits to methods in prescriptive policy analysis; including to be better able to (1) analyse the assumptions and logic behind policy documents and proposals, and (2) help to generate alternative policy arguments, options, scenarios and advice.

Specific targets:

- To understand, participate in or critically assess the use of a set of important methods and approaches, including stakeholder analysis, argumentation analysis, logical framework analysis, economic cost-benefit analysis, other cost-utility techniques and multi-criteria analysis, rights-based approaches; and methods to promote critical and creative thinking.
- To understand the contributions and limitations of a set of influential background perspectives in public policy and public management, including: "managerialism", where criteria for choices are set by managers and leaders; "econocracy"; where criteria for choices are set by purchasers; and democratic pluralism, where criteria and choices are negotiated between multiple stakeholders.

Course description

This is a course about preparing, designing and selecting public policy (public strategies, programmes and projects). It is mainly on analytical approaches and methods that are intended to guide policy design and to structure policy choice. The course looks at approaches and techniques in a politically aware way, and considers throughout how they may work in practice. This shows fundamental limits upon, as well as specific roles for, prescriptive policy analysis. While policy makers may see themselves as producing social change through intellectual endeavour, they are embedded in and are the product of broad processes of social and intellectual change. Policy making is a social (multi-actor) process involving a battle of ideas and struggles over resources, with competitive and collaborative interactions between various groups who have diverse beliefs, interests and information. Policy documents are parts of these battles. Policy making is in part an exercise in cultural construction, legitimising authority, and motivating people.

ISS-4211 Promotion of Local Economic Development

Code	ISS-4211
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Peter Knorringa
Lecturers	Georgina Gomez, Peter Knorringa
Teaching Methods	Participatory Lectures, Study Visits, Workshops and Presentations
Modes of Assessment	Assignment (Essay): 40%, Reflection Paper: 20%, Take Home Assignment: 40%
Course Administration	TLST

Learning objectives

After completing this course students will be able to identify, collect information on, and formulate joint, collective and public action to promote economic development in a particular locality or region. They will also be able to identify appropriate institutional arrangements and strategic plans and negotiate implementation, and in particular to:

1. understand and assess the rationale, goals, instruments and implementation issues of policies aimed at strengthening local economic development;
2. devise differentiated policies for local economic development;
3. evaluate the relative 'fit' between the goals, instruments and implementation tools of policies to strengthen local development; and
4. assess the possibilities of bringing about convergence of interests and actions through processes of negotiation and strategy formulation.

Course description

The course begins with an analysis of the changing characteristics of the business environment with a focus on competitiveness, the emergence of LED as a policy problem and then a conceptualisation of the locality as an integrating framework of multi-actor, multi-sector and multi-level sets of policy actions. This includes a set of case studies. The next set of sessions covers a menu of different policy options. These include: enterprise development through incubators, cluster development; value chain and SME upgrading; locality development, local innovation systems and learning regions and alternative local exchange and trading systems. For each policy option group assignments are developed to deepen the knowledge. Around these themes also study visits are organized for which students have to register at the beginning of the course. The small group assignments and study visits reports will be presented in six workshops spread over the course. The last two sessions centre on strategic thinking and management of multi-stakeholder agreements as central elements, which may determine the success or failure of efforts aimed at the promotion of local economic development (LED). Effective promotion of LED not only requires sound technical justification but also effective strategizing. The module ends with a synthesis workshop, which also prepares for the exam.

Indicative readings

ISS-4212 Contemporary Capitalism and Governance: Neo Liberalism and Beyond

Code	ISS-4212
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Karim Knio
Lecturers	Thanh Dam Truong, Rosalba Icaza Garza, Karim Knio, Hans Oversloot
Teaching Methods	Participatory Lecture
Modes of Assessment	Assignment 1 (Essay): 50%, Assignment 2 (Essay): 50%
Course Administration	TLST

Learning objectives

After completion of the course, students will have:

- enhanced their knowledge of market led restructuring reform policies in contemporary capitalist economies;
- Situate the theories within the thematic settings of the course;
- acquired an understanding of the various interpretations that are relevant to explaining the nature, rise and evolution of neo liberalism;
- strengthened their ability to analyse critically the claims made by scholars and other observers of neo liberal political, economic and social reform policies;
- improved their academic skills in writing short and long essays.

Course description

This is a course about the rise, nature and evolution of neo liberalism and how it has become, not just as an idea, a preferred policy template or set of interests among many, but the most influential policy agenda for the reshaping of the global order and the way in which political and economic life is organised. This course examines the ideological, economic and political reasons for this ascendancy and the institutional and political forces behind their existence.

The course is divided into three parts. Part I looks into the multiple ways in which the term has been defined ranging from orthodox approaches which deny the existence of neo liberalism, to many heterodox accounts in International Political Economy (IPE) literature which treat it as a hegemonic discourse and practice. It also analyses the policy metamorphosis of neo liberal reforms by tracing the shift from the structural adjustment/Washington Consensus era to the so called Post Washington Consensus era with its emphasis on institutional building, good governance policies and poverty reduction strategies. Part I concludes by asking whether neo liberalism is still alive today or whether it has evolved in its nature towards something new and different. Part II looks into the processes through which neo liberal reform policies have been appropriated and implemented, and the impact of these upon existing governance systems of social and political power. It draws on a variety of case studies including the implementation of neoliberal reforms in Latin America, Africa, South East Asia, China, India, Russia, The European Union and the Middle East. Part III is thematic in its nature and shifts the analysis towards the implication of neo liberal reform policies on the current global financial architecture, gender relations and environmental conservation.

ISS-4216 Human Rights, Law and Society

Code	ISS-4216
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Karin Arts
Lecturers	Karin Arts, Jeff Handmaker, Guest Lecturers
Teaching Methods	Participatory Lecture, Workshop, Study Visit, Tutorials
Modes of Assessment	Assignment 1: (Mid-term Individual Workshop Report): 20%, Assignment 2: (End-of-course Essay): 65%, (End-of-course Individual Essay Topic) Presentation: 15%
Course Administration	TLST

Learning objectives

In this course students will:

- enhance their understanding of, and capacity to critically analyze, the (potential) functions of law and legal procedures for fulfilling human rights, and the roles of international and national governmental and civil society actors in this regard;
- deepen their insight into the inherent political, economic and other constraints of legal systems;
- sharpen their knowledge of the interplay between national, regional and international legal systems.

Course description

Fulfilling human rights and social justice requires much more than an adequate legal framework alone. Law can be an important facilitator of, but also a hindrance to, the realization of human rights. Aimed at a mixed audience of students with and without a legal background, this course provides a basis for students to understand the role of law in relation to protecting and promoting human rights and to critically evaluate the legal structures that frame human rights and certain possibilities for civic action. Various theoretical underpinnings (for example relating to processes of law-making; linkages between law, human rights and development; sociology of law; the relationship between international and national law; the role of both governmental and civil society actors) will be discussed. Different examples of international and national human rights law-making and monitoring efforts, and of legal frameworks for human rights-based approaches to development, will be studied. Throughout the course, biases and gaps in law and legal systems, and efforts to overcome them, will be analysed. Examples of more specific subjects covered include the role of Constitutions, gender biases in international law, non-state actors and human rights law, domestic violence, the meaning and implications of child rights-based approaches to development, legal mobilisation against racial discrimination in the Netherlands, and UN human rights treaty body procedures.

ISS-4217 Governance, Conflict Analysis and Conflict Management

Code	ISS-4217
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Mohamed Salih
Lecturers	Mohamed Salih, Helen Hintjens, Mansoob Murshed
Teaching Methods	Lectures, Participatory Lectures, Theme Lectures, Study visit, Tutorials, Workshop
Modes of Assessment	Assignment: 50%, Written Exam: 50%
Course Administration	TLST

Learning objectives

Having completed the course, the students will be able to:

1. Identify and analyze the multiple causes and consequences of conflict;
2. Comprehend the current debate on governance role and capacity to manage conflicts;
3. Understand the use of social science theoretical and conceptual frameworks to explain the role of governance in conflict management, state collapse and humanitarian intervention;
4. Analyze, contextualize and assess conflict case studies and assess the quality and capacity of local, national and multi-lateral governance institutions to manage conflicts;
5. Acquire analytical skills in conflict analysis and management.

Course description

The course on Governance, Conflict Analysis and Management articulates conflict as a universal and context-specific phenomenon. As a universal phenomenon, conflict is ever-present almost at every level of human interaction, with varying degrees of consequences on individuals, groups, states and inter-state entities and relations. The course seeks to link various factors and actors that can cause, sustain, transform or contribute to managing conflicts.

The course enables the students to articulate, identify, analyse and discuss the characteristics of “good governance” principles and practice. Methodologically, the course is concerned with the capacity of governance institutions to perform their role in securing duties and rights, developing capabilities and managing conflicts.

The course focuses particularly on violent conflicts because of their most visible consequences on almost every aspect of human existence. As a tool for conflict management, governance too is embedded in peoples’ histories, past and present experiences, religious and ethnic relations as well as political culture and material conditions. Therefore the two components of the course i.e. governance and conflict management cannot be treated in isolation from each.

ISS-4218 Children and Youth Studies in Development Context

Code	ISS-4218
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Kristen Cheney
Lecturers	Karin Arts, Kristen Cheney
Teaching Methods	Blended Learning, Participatory Lecture and Discussions, Workshops
Modes of Assessment	5 (Short) Assignments (10% each): 50%, Assignment 6 (Critical Literature Review): 50%
Course Administration	TLST

Learning objectives

Course participants will gain familiarity with the burgeoning interdisciplinary field of Children & Youth Studies, whose ideas have shaped how children and youth are viewed in social policies and development institutions. Students will strengthen their ability to understand, explain and engage with theories and debates about childhood and youth in the social sciences, development economics and international law, and to link these perspectives to concrete situations, problems, and policies. Students will also become familiar with child- and youth-centered methodologies and theoretical approaches.

Course description

The late twentieth century witnessed a dramatic shift in conceptions of children's rights and participation practices, prompting development studies to more critically engage with the intergenerational and age-based complexities of policy implementation. Taking childhood and youth as socially constructed categories, this course asks how particular understandings of young people are significant for policies that value social justice, equity and inclusion by taking young people not just as objects for development but as active participants in social change. Drawing on interdisciplinary social science perspectives that comprise contemporary Children and Youth Studies, students will critically examine how changing conceptualizations of young people's roles in social policy manifest in various development discourses, from social protection to rights-based approaches.

Students will consider concepts such as citizenship, globalization, vulnerability and agency in relation to such areas as children's rights, education, work, media and communication technologies, and sexuality. We will also discuss innovative methodologies and ethical considerations for conducting research with young people.

ISS-4226 Feminist Theories and Strategies for Development: Global and Local Perspectives

Code	ISS-4226
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Nahda Shehada
Lecturers	Amrita Chhachhi, Silke Heumann, Rachel Kurian, Nahda Shehada, Dubravka Žarkov
Teaching Methods	Participatory Lectures, Tutorials, Workshops
Modes of Assessment	Assignment: 100%
Course Administration	TLST

Learning objectives

In this course, students will:

- learn to recognize and apply feminist analysis of the state, the market and the family, taking into account the intersections of gender with other social relations of power;
- gain basic knowledge of feminist conceptualization of economic exclusion, sexuality and culture, and their institutional and structural inter-relatedness;
- gain critical understanding of the relationship between conceptualizing and strategizing, and institutional practice and social change.

Course description

Divided into three blocks, this module provides a foundation in analytical thinking on the production of knowledge as social and institutional practice, and on its transformative potentials. Central to the first block is the question of feminist production of knowledge within feminist/development studies. We will look at different subjects and objects of feminist / development knowledge in the context of North/South relations of domination and marginalization and explore their theoretical and political consequences. We will analyse how globalization processes and local dynamics impact upon contemporary feminist theorizing of the gendered and racialised world, paying attention to particular forms of analysis and strategic interventions.

The second block explores knowledge embedded in institutions and institutional practices – focusing on the family, the state and the market(s). Here we pay special attention to the intersections of these three institutions and their gendered practices of ruling. We look at the ways globalization has transformed them, as well as the ways they are theorized.

The third block explores the power/knowledge nexus embedded in strategies for change and social transformation. Focusing on concepts of agency and empowerment, we look at specific social relations of power and analyse possibilities for and effects of individual and group interventions into institutional practices, social structures and the micro-politics of everyday life.

ISS-4227 Securitisation of Development: Violence, Humanitarianism and Peace

Code	ISS-4227
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Helen Hintjens
Lecturers	Jun Borrás, Helen Hintjens, Thea Hilhorst, Dubravka Zarkov
Teaching Methods	Participatory Lectures, Simulation, Film, Guest Speakers and Visit
Modes of Assessment	Essay Assignment: 50%, Simulation-related assignment: 50%
Course Administration	TLST

Learning objectives

- Enable students to explore theorizing and strategizing about security and development, through the lens of ‘securitisation’ and ‘desecuritisation’;
- Analyse the expanding ‘security-development nexus’ that reconnects development with security;
- Reflect on humanitarian dilemmas amidst contemporary war, violence and the ‘war on terror’;
- Analyse approaches to transitional justice, reconciliation and peace as part of liberal development
- Understand perspectives from Biopolitics, Conflict and Peace studies, feminist and critical studies approaches, economics, agrarian change, international relations and ‘Disaster’ Studies
- Consider cases that illustrate dilemmas of ending violence, reconciliation and peace-making.
- Introduce students to psycho-social and other alternative approaches to conflict transformation and healing through a role-play simulation on humanitarian aid in Syria.

Course description

Placing securitizing of development in a wider policy context is core to this course. Growing theoretical, policy and practical concern with how to restore security and end violent conflicts informs the background to new and sometimes violent forms of ‘humanitarian’ intervention. So-called ‘new wars’ have accompanied marked ‘securitisation’ of development agendas since the 1990s. Securitisation is not always negative; for example in the case of intervention to prevent epidemics. Securitisation theory, and desecuritisation approaches are thus useful lenses for understanding how issues do, or do not, get onto the political agenda, become ‘emergencies’ or are neglected and ignored. The course includes insights from security studies, conflict and peace studies, feminist theorising, and psycho-social approaches to post-conflict healing. A range of examples – including a simulation centred on humanitarian aid to Syria – presents challenges for ethically-informed decision-makers involved in humanitarian work and peace-building around displacement and refugees. Some questions are asked, such as: What do we mean by securitisation, and what is desecuritisation? Can transitional justice systems deliver justice? How can humanitarians avoid helping armed actors? Should past violence be memorialised, and if so, how? When organising intervention, it is not enough to respect humanitarian principles of ‘Do no Harm’; we need more critical insights into politics to help guide practices. Conflict and peace theories are dealt with in more detail in 4217, a sister course to 4227.

ISS-4228 Population, People and Resources: Generations and Regeneration

Code	ISS-4228
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Mahmood Messkoub
Lecturers	Auma Okwany, Mahmood Messkoub, Karin Astrid Siegmann
Teaching Methods	Participatory Lectures, Workshops: Work-group Discussions and Presentations, Debates and Case-studies
Modes of Assessment	Group Assignment: 15%, Assignment (Essays and Policy Brief): 85%
Course Administration	TLST

Learning objectives

This course will provide participants with theoretical and conceptual frameworks for the understanding of the inter-relationship between generations and social development, through the study of changes in demographics (fertility, mortality, age structure and migration) of a country, social relationships among generations and their implications for development policy design and implementation.

Course description

The course centres on the inter-relationship between population and generation, reproduction of labour and social regeneration and reproduction and the role of development in this inter-relationship. We should note that social reproduction is mainly about renewal of the existing social, cultural and economic structures but in our view should also be about change in order to remove obstacles to economic development at macro level as well as removing constraints on individual capabilities, freedom and general human development.

Whilst in general development is about how to change and improve 'people' lives, we should ask who the 'people' are (who should be the object of development) and what the policies should be. This is fundamentally about the design and implementation of development policies that should be aimed at 'people' who are differentiated on the basis of demographic, gender, race, class and other social and economic categories.

The course is designed around three blocks, which reflect our approach to the inter-relationship among population, generation, social policy and regeneration/reproduction. In block one participants will be introduced to the basic concepts of population studies. Block two focuses on population as a resource, its work and employment implication as well as its relationship with other resources such as land and the environment. In block three we explore some of the education and health policies that are essential to regeneration/reproduction of individual and societies. Different models of social provisioning (private and state/public, residual and universal) will also be discussed and their implications for equality of access and outcome analysed.

ISS-4229 Global Environmental Politics

Code	ISS-4229
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Murat Arsel
Lecturers	Murat Arsel, Wendy Harcourt, Mindi Schneider
Teaching Methods	Participatory Lecture, Simulation
Modes of Assessment	Assignment 1 (Individual Essay): 35%, Assignment 2 (Simulation): 15%, Written Exam: 50%,
Course Administration	TLST

Learning objectives

This course provides a comprehensive overview of global environmental changes and their political economic implications. After completing it, students will be able to:

- Critically interrogate the creation of and solutions to global environmental problems such as climate change;
- Understand the ways in which global environmental problems are fundamentally grounded in social, economic and political relations;
- Evaluate the changing relationships between the modern nation-state system, global capitalism and the environment;
- Analyse key policy documents produced by organizations such as UNEP and WTO on global environmental politics, assessing their validity and usefulness for policy making;
- Develop in-depth understanding of various environmental problems relating to mining, oil extraction and industrial development and their place in global environmental politics.

Course description

Why is so little being done to address global environmental problems such as climate change, deforestation, and biodiversity loss? How should developing countries contribute to their resolution? What can individuals and alternative social forces do to tackle global environmental problems? This course provides answers to these and other similar questions at the heart of global environmental politics.

The course is constructed around the tension between the sovereignty of nation-states and the need to achieve global socioeconomic justice. It critically evaluates the role played by a number of key actors in global environmental governance such as UNEP, WTO, IPCC, civil society organizations and corporations and takes an in-depth look at various contemporary issues, such as mining, geo-engineering, biotechnology and renewable energy. Throughout these discussions, particular attention is paid to the ways in which the legitimacy, accountability and capability of states shape and are shaped by global environmental processes and outcomes. The course critically interrogates the suggestion that global environmental governance is increasingly taking the shape of 'environmental colonialism'. In so doing, it theorizes the potential pathways to identifying and (re)conceptualizing alternative solutions to global environmental problems.

ISS-4231 Growth, Inequality and Poverty

Code	ISS-4231
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Elissaios Papyrakis
Lecturers	Elissaios Papyrakis, Mansoob Murshed
Teaching Methods	Participatory Lecture, Workshop
Modes of Assessment	Assignment: 50%, Written Exam: 50%
Course Administration	TLST

Learning objectives

Students will have a clear understanding of 1) the long-term patterns of growth; 2) new theories regarding the determinants of growth, international trade and trade policy; 3) the link between economic growth and poverty, as well as the interaction between growth and inequality; 4) the importance of growing inter-national inequality; 5) the long-term causes of growth which include the links between economic growth, natural resource endowments, culture, geography, conflict and institutions, as well as how these linkages are influenced by economic policies; 6) put their own country experience with economic reform policies in a comparative perspective; and, 7) understand empirical analysis to assess the impact of institutions and other economic reform policies on long-term economic growth and poverty reduction.

Course description

This course will address matters related to long-term economic growth, as well as related issues in inequality (the distribution of income and wealth) and poverty that ultimately contribute to sustainable development. One of the major problems associated with development are the low-incomes of today's developing countries. For most poor countries growth constitutes the principal avenue via which poverty can be reduced, as growth provides greater opportunities and enlarges the economic pie. Another, related, issue concerns distributive justice, both at the national level and between nation states. Excessive inequality can undermine societal cohesion and human security. Today's rich countries are affluent because they historically grew faster than the poor nations of the world. The study of the causes of rapid growth is, therefore, important. Is growth driven merely by physical capital accumulation through savings? Or are ideas and human capital accumulation equally important? Does greater income or wealth inequality hinder or foster growth? Is the lack of rapid growth a consequence of the failure of policies being coordinated between different branches of the economy? Ultimately, are there are other factors that determine long-term growth besides policies: geography, endowments, institutional quality (governance and democracy), cultural (religious) character and internal conflict? What is the difference between growth trickling down to the indigent and destitute, and genuinely pro-poor growth. We are constantly being told that increased international trade and openness is key to economic success. But, does trade benefit all countries equally? Is trade between the North and the South less advantageous for the South? Also, trade is meant to be an engine of growth, but has growing trade in our globalized era brought average incomes in the world closer together or further apart? In addition to the theory and empirical evidence connected with the issues enumerated above, students will become familiar with the analytical tools required to apply these and other issues towards more detailed case studies, and comparative analyses.

ISS-4233 Global Economy

Code	ISS-4233
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Howard Nicholas
Lecturers	Howard Nicholas, Peter van Bergeijk
Teaching Methods	Participatory Lecture, Workshop
Modes of Assessment	Assignment 1: 43%, Assignment 2: 42%, Group Assignment: 15%
Course Administration	TLST

Learning objectives

The major objective of the programme of lectures as a whole is to provide students with an understanding of the nature and functioning of the world economy and process of economic globalization, with a view to making sense of the competing arguments regarding the alleged benefits and adverse consequences of this process for developing countries. With this purpose in mind, the module seeks to acquaint students with the concepts and theories used to understand: (1) the international division of labour and globalized system of production; (2) the development processes in non-OECD countries; (3) the global trading system; (4) the global financial system. It is hoped that the insights gained will provide students with a basis for assessing the development possibilities and constraints afforded by the global economic system, including its structures and policy environment.

Course description

The lectures are divided into five parts. Part 1 provides students with the necessary conceptual and theoretical basis for understanding different perspectives on the functioning of the global economy and the process of economic globalization. Attention is paid to the current financial and economic turmoil affecting the advanced countries. Parts 2, 3, 4 and 5 then build on these foundations. Part 2 considers development processes in non-OECD countries, and the role of Aid in these processes. Part 3 introduces students to the various structures governing the global trading system, including a number of multilateral and regional trade agreements. There is a particular focus on agreements governing trade in agriculture and manufactured products, services, and intellectual property rights, as well as proposed extensions of these agreements and new ones in respect of investment and government procurement. Part 4 looks in depth at international trade, investment and trade policy. Particular attention is paid to national trade strategies. Finally, part 5 considers the ongoing processes of international financial reform and macroeconomic policy coordination against a backdrop of the recent global financial crisis.

ISS-4237 Global Food Politics

Code	ISS-4237
Weight of the Course	8 ECTS
Period	TERM 3
Course Leaders	Mindi Schneider
Lecturers	Mindi Schneider
Teaching Methods	Participatory Lecture, Tutorials, Workshops
Modes of Assessment	Assignment (Essay): 40%, Group Assignment: 10%, Written Exam: 50%
Course Administration	TLST

Learning objectives

The course is designed for both AFES participants and for students in other Majors whose research interests relate to global food politics. The course aims to strengthen your capacity for critical analysis on the broad issue of food and farming systems. You will become familiar with commodity chain analysis as a theoretical and analytical tool for understanding the roles of powerful corporations and states in the organization of agrifood systems, the social and ecological implications of present trends, and emerging alternatives aiming for equity and sustainability in food systems and beyond. On completion of the course you will have gained experience in conducting critical analysis of the chain of people, events, materials, and relations involved in the making of food and farming systems.

Course description

Food serves a double function in this course: it is both the topic of investigation, and a provocative lens through which to analyse broader processes of development and social change. Based on studies of agrifood systems at inter-connected local, national, and international levels, we explore the material and symbolic functions of food in relation to hunger, health, power, labour, land, and ecology. We critically engage questions about food distribution and food security, food policies and practices, food sustainability and equity. In addition to mapping some of the most pressing food-related challenges facing humanity today, we also consider 'alternative' food initiatives and social movements, and how they might constellate into a different and better global food system.

ISS-4238 People on the Move: Migration, Globalisation and Livelihood

Code	ISS-4238
Weight of the Course	8 ECTS
Period	TERM 2
Course Leader	Mahmood Messkoub
Lecturers	Des Gasper, Helen Hintjens, Mahmood Messkoub, Karin Astrid Siegmann
Teaching Methods	Interactive lectures, workshops and seminars
Modes of Assessment	Assignment: 85%, Group Assignment (Presentation): 15%
Course Administration	TLST

Learning objectives

This is a course on the political economy of migration and mobility in the world. It provides participants with knowledge of the causes, character and consequences of national/internal and international migratory movements in the world. Those Specialising in Population and Development are required to take 4238 as part of their Specialisation programme.

Course description

This course locates the dynamics of migration in a historical perspective, paying attention to the geo-political and economic contexts and taking note of the evolving complexity and multi-causal nature of migration. The course deals with the causes of migration (for example, demand for labour, displacement, differences in income and employment opportunities between two regions); and its consequences (e.g., 'brain/skill drain', remittance of money by migrant, gender balance at origin and destination); as well as the cultural and political dimensions of migration such as the debate on the control of migration and integration of migrants.

Modern migratory movement can best be understood in the context of a globalized market economy that directs and regulates the flows of goods, money and labour. As far as migration is concerned the impact of globalization goes far beyond the international movement of labour. The course pays particular attention to the formation of diverse migratory regimes within and across countries and regions.

Globalization has accelerated the pace of liberalization, deregulation and flexibilisation of labour markets.

Labour, unlike other goods and commodities, is embodied in human beings, with physical, gendered and cultural characteristics that are shaped by history. This gives labour migration its distinct political and cultural dimensions. The course will also deal with some of these aspects of migration by addressing the current debate in receiving countries in Europe and USA with regard to the integration of migrants.

Besides labour migration, there are other migratory flows such as family re-union, migration for education and most important of all forced migration from regions and countries in situations of conflict or war. We consider how forced migration is 'managed' and how it is being redefined, legally and politically, and in relation to international agreements and treaties such as 1951 Geneva Refugee Convention. We also ask questions on how internally displaced persons are affected by migration-/refugee-regimes and regulations, and how state and non-state actors in various parts of the globe seek to manage and control 'forced migration' in relation to restrictions on 'other' migration.

ISS-4270 Migration and Development: Globalisation, Livelihoods and Conflicts

Code	ISS-4238
Weight of the Course	5 ECTS
Period	TERM 2
Course Leader	Mahmoud Messkoub
Lecturers	Des Gasper, Helen Hintjens, Mahmood Messkoub, Karin Astrid Siegmann
Teaching Methods	Interactive lectures, group presentations, guest speaker session/visit.
Modes of Assessment	Individual Assignment(s): 85%; Group Assignment (Presentation): 15%
Course Administration	TLST

This course can only be taken as part of the master programme 'Governance of Migration and Diversity'

Learning objectives

- To understand migration processes, systems and life experiences, in relation to interactions of economic systems, nation-states, and migrant strategies for coping and livelihood
- To explore holistically migrants' livelihood situations, well-being and ill-being, using a human security framework
- To be exposed to life experiences of migrant workers, their labour market situations, struggles for labour rights, and (lack of) access to social security arrangements
- To consider specifically the situations of women in migration systems, and the distinctive and extra demands and risks they may face
- To consider specifically the situations of asylum seekers and refugees, including as a result of the shift in recent decades to increasingly harsh and restrictive policies; and the counter-attempts to forward refugee rights
- To introduce contemporary positions on the ethics of migration and migration policies.

Content

The course examines the processes and structures of migration, both internal and international and South-South as well as South-North, combining a holistic focus on people's lives and a global political economy perspective. It notes multiple causes of migration (including conflict and environmental change, demand for labour and differences in economic opportunities between regions); and some of the consequences (e.g. money remittances, changed balance of genders and generations, cultural and political impacts). The dynamics of migration must be analysed in the context of, first, the globalized economic system, and, second, the system of nation-states. The impact of economic globalization and other economic restructuring and change is felt within countries too; overwhelmingly most migration takes place within countries.

Migration is of people not things. This makes it not just one more resource flow in the global economy. It brings major social impacts, tensions and opportunities, worldwide. Besides labour migration, and huge flows for family re-union and education, there is large-scale forced migration from regions in situations of conflict. These various flows are partly linked to 'side-effects' (cultural, environmental, climatic, political) of the transformations wrought by global economic developments.

Within this perspective, the course considers how state and non-state actors in various parts of the globe seek to manage migration of various types, in diverse migratory regimes that have emerged within and across countries and regions. It gives special attention to the lives of labour migrants, and also to the governance regimes around forced migration. It raises the question of how far do responses to migration give serious attention to its causes.

ISS-4303 Realizing Rights and Social Justice

Code	ISS-4303
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Helen Hintjens
Lecturers	Jeff Handmaker, Wendy Harcourt, Helen Hintjens, Rachel Kurian
Teaching Methods	Participatory Lectures, Workshops, Film and On-line Role Play Simulation
Modes of Assessment	Assignment (Essay, Case Study, Student Choice): 50%, Assignment (Refugee Rights Simulation Essay): 25%, Simulation Participation and Tasks: 25%
Course Administration	TLST

Learning objectives

By the end of the course, students should better be able to:

1. understand how the framing, claiming and realizing of rights involves values, institutions and complex processes over time;
2. consider how legal and non-legal forms of advocacy combine local, national and global reforms, to challenge entrenched social exclusion and human insecurity and injustices
3. consider the importance of strategic international alliances, participation, creativity and co-learning for the advancement of both human rights and social and feminist perspectives on justice;
4. have insight into the complexities of human rights and justice advocacy at global, regional, state/national and local-levels through legal and non-legal means;
5. take part in an in-depth simulated exercise so that the complexity of rights-defending and promoting and justice-related interventions is appreciated experientially as well as identify core conceptual and practical issues and kinds of information that can help ensure that states and other key actors respect the 'right to rights' of socially excluded people.

Course description

This course starts by outlining 'rights-based approaches' to development, focusing on mobilization for human rights to enable communities that face social exclusion and human insecurity to improve their situations. Whether under 'transitional justice' or just 'normal' development, strategies and processes of framing, claiming and realizing human rights are understood as involving various actors – especially states but also civil society, private companies and other social actors. We integrate economic and social rights with civil and political rights, presenting examples of how the rights campaigns 'from below' of socially excluded groups are organised and evolve. We look at modes of rights and justice advocacy from the most local to transnational. Transitional justice is also placed in a wider social justice and human rights context, through an extended simulation involving role-play aimed at enhancing students' experiential learning about the complexity and negotiation skills required for successful rights-claiming strategies. The course provides room for critical reflections, and for learning attitudinal skills vital for realizing more socially just outcomes, even in what appear to be the most unpromising circumstances.

ISS-4307 Politics of Global Development: Debating Liberal Internationalism

Code	ISS-4307
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Rosalba Icaza
Lecturers	Rosalba Icaza, Sarah Hardus, Karim Knio, Jeff Handmaker
Teaching Methods	Participatory Lecture, Presentation
Modes of Assessment	Assignment: 85%, Presentation: 15%
Course Administration	TLST

Learning objectives

After completion of the course, students will have:

- enhanced their knowledge of contemporary global governance, in particular of the institutions and ideas shaping global public policy;
- acquired an understanding of the various interpretations that are relevant to explaining global governance and global public policy;
- strengthened their ability to analyse critically the claims made by scholars and other observers of global governance and global public policy;
- developed a nuanced understanding of the extent to which liberal ideas, norms and values continue to shape global institutions;
- developed a critical understanding of the different ways in which emerging powers influence the role and agenda of global governance institutions;
- developed their skills of presenting the results of their own research to an audience and assessing the research findings of others.

Course description

This course, which is focused on the global political-economic context of the development process, aims to contribute to a better understanding of the various manifestations of global governance in today's world, as well as the arguments for global – that is, not territorially confined – public policy making. Regimes of global governance have an important impact on policy formulation in countries of the global South, and an understanding of these regimes is required in order to assess the constraints and opportunities that governments, the private sector and civil society are facing in achieving their objectives.

The course is divided into three parts. The first part lays the groundwork for a critical discussion of liberal internationalism, global governance and its various manifestations. Moreover, it assesses the extent to which the current global order is being challenged by the increasing role of so-called 'emerging powers'. Second, we move onto the institutional paraphernalia of global governance itself, zooming in on the United Nations (UN); the World Trade Organisation (WTO), including global trade politics more broadly; the Group of 8 (G8) and the Group of 20 (G20); and the OECD Development Assistance Committee (DAC) and other institutions driving international development cooperation. We assess the (lack of) changes within these institutions and the implications for the broader edifice of the liberal world order. The third part of the course builds on the previous two parts and discusses liberal internationalism in relation to neoliberalism and the international legal domain. Moreover, it explores the future of global governance theorizing.

ISS-4311 Children, Youth and Development: Policy and Practice

Code	ISS-4311
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Auma Okwany
Lecturers	Auma Okwany
Teaching Methods	Participatory Lecture, Workshop (films, poster presentations), Study Visit
Modes of Assessment	Assignment 1 (Policy Brief): 35%, Assignment 2 (Individual Essay): 50%, Group Assignment: 15%
Course Administration	TLST

Learning objectives

By the end of the course participants will have developed a firm grounding in policy and practice in specific areas of current concern in the field of children, youth in social policy.

Course description

Growing awareness of the number of children and youth affected by poverty, insecurity, exclusion, violence, migration and inadequate social service provisioning has led to increased concern for the promotion of their rights and well-being as well as their capacity to play an active role in their own development. Young people are among the most heavily governed in society yet generational relations receive marginal attention in social policy. Governmentality, as a key concept in the course, enables analysis that moves beyond the micro-context to the direct processes of the state and issues of power (voice), social control, and exclusion. The course provides both a broader perspective and a critical analysis of changing ideas and debates on policies and institutions, which aim to shape young people's lives and the changing character of their praxis. The course engages students in theoretical, methodological, and substantive critical discussions on selected policy/problem areas with a specific focus on policy questions around: social protection, early childhood care and development, education for active citizenship, understanding youth in development including transitions, (un)employment, adolescent sexuality and reproductive health. This will strengthen participants' capacity to place individual problems in their broader analytical and policy context and enhance their ability to participate with confidence in policy debates in this area. Emphasis is on young people as active policy actors and the implications of a social justice approach for policy in the work of state and non-state actors.

ISS-4312 International Financial Reform

Code	ISS-4312
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Peter van Bergeijk
Lecturers	Peter van Bergeijk, Rolph van der Hoeven, Matthias Rieger
Teaching Methods	(Participatory) Lecture, Workshop. Simulation, Study visit
Modes of Assessment	Assignment (Individual Essay) 70%, Group Assignment (Simulation): 15%, Presentation 15%
Course Administration	TLST

Learning objectives

The course will provide students with both theoretical skills and practical experience in the use of tools for empirical policy analysis as a basis for policy advice and policy preparation.

The objective is to increase the understanding of the role of (inter)national finance in development (that is: the various types of capital, the markets and institutions that intermediate these flows and the global financial environment that influences economic conditions in developing countries).

The Module assesses a) how the various flows of finance affect the different types of developing countries and b) the policy options at the national and global levels. At the end of the Module, students will have a clear knowledge of:

1. The workings of the global finance and its impact on developing countries: different views and alternative approaches;
2. The workings of national and international financial markets, (both micro finance and macro finance);
3. The causes of financial crises according to different theoretical points of view and the current phase of the crisis;
4. The options to manage global finance through co-ordinated international macroeconomic policies and existing and new institutional and regulatory frameworks.

Course description

Domestic financial markets and institutions have an important role in mobilising resources and allocating funds to producers. Foreign capital can add to the resources available for investment. Financial globalization has progressed significantly and would seem to increase the access for developing countries to development finance.

Many developing countries have liberalized the domestic financial markets and quite often also removed restrictions on international capital movements. Global financial markets have expanded enormously but are also increasingly volatile and unstable. Many other, poorer, developing countries have become more marginalized, dependent on aid and debt relief.

While finance can contribute to investment and growth, it can also be a source of instability and crisis as many countries have experienced. There is thus a need for a careful financial policy, but the financial markets of developing countries are small relative to the vast flows on the international markets and this limits the ability of national governments to ensure stability; international action is required and that is why international financial reform is the subject of this course.

ISS-4313 Violent Conflict, Media and the Politics of Representation

Code	ISS-4313
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Dubravka Žarkov
Lecturers	Dubravka Žarkov, Helen Hintjens, et al.
Teaching Methods	Participatory Lectures, Workshops, Computer Exercises, Presentations
Modes of Assessment	Individual Assignment: 85%; Group Assignment: 15%
Course Administration	TLST

Learning objectives

This course aims to:

- equip students with a deeper understanding of relationships between mediated and symbolic violence and war, on the one hand, and social, political and economic violence, on the other hand;
- enable students to critically interrogate the media-constructed production of knowledge about war, violence and peace from diverse theoretical perspectives;
- equip students with basic skills in using specific tools for analysing gendered, racialized, sexualized and ethnicized representations in visual and textual media material.

Course description

The last two decades have witnessed growing theoretical, professional and public concern with the involvement of media in violent conflicts. From war in Bosnia to genocide in Rwanda, from international interventions in Kosovo to Libya, from 'war on terror' to 'Arab Spring', from Al Qaida to ISIS, the broadcasting, print and social media have become major players in influencing public opinion about violent conflicts and their protagonists. Media images have been used by politicians, (para-)militaries, humanitarian and development workers and human rights activists to demand and justify various forms of intervention, or to explain non-intervention.

We examine the dynamics that link textual and visual media representations with diverse public actions and actors, and military, political, humanitarian and development discourses and practices. We perceive media as part of the process of production of knowledge about contemporary world and the wars and violence within it, relying on critical scholarship from cultural and media studies, feminist, black, post-colonial and conflict studies. Throughout the course we use a range of diverse media material (press, cinema, TV, web-based sources), look at various national and international media, and analyse how they represent past and present conflicts and violence from across the globe. The course is based on hands-on, in-class and home-based exercises.

ISS-4317 Econometric Analysis of Development Policies

Code	ISS-4317
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Arjun Bedi
Lecturers	Arjun Bedi, Matthias Rieger, Elissaios Papyrakis
Teaching Methods	Lectures, Computer Exercises
Modes of Assessment	(Homework) Assignment 1 - 40 %, (Homework) Assignment 2 - 40 %, Presentation: 20%
Course Administration	TLST

Learning objectives

By the end of the course students will be equipped with the necessary methodological skills required to understand published empirical papers in development studies/economics. Through their assignments they will have developed the ability to conduct empirical research using modern econometric techniques, including randomized control trials and behavioral experiments. The course will also provide practical advice on how to design and run behavioural experiments. Overall, at the end of the course students should have developed the skills needed to conceive, organize, conduct and present empirical research.

Course description

Each year several students find that the methodological tools at their command often falls short of the problems that they would like to analyse. This shortcoming sometimes hampers their ability to read and understand empirical papers in professional journals and restricts their ability to carry out a more sophisticated analysis of the research issues that they have chosen to tackle. The aim of this course is to pre-empt such problems.

While enhancing their ability to apply appropriate methods and techniques is certainly part of the course, primacy is given to the development problem that is to be analysed and the choice of problem will dictate the econometric technique or the approach to be studied/used. The course is structured in terms of a problem-solving approach and each year it is tailored to the revealed needs of the students. The course is divided into three sections. The first part of the course will deal with the concepts and methods of impact evaluation in the social sciences. This part of the course begins with a review of the evaluation problem and then discusses various non-experimental (regression discontinuity design, difference-in-differences, propensity score matching) and experimental (randomized control trials) methods that may be used to evaluate the outcomes of various interventions. The second part of the course will deal with the use and application of behavioural experiments. The aim is to use such approaches to understand how people and groups behave. Such methods are now being applied across many disciplines ranging from psychology, anthropology, sociology, political science and economics. This part of the course will provide an overview of standard experiments (e.g. trust, public good, risk, discount games) and how they have been applied in areas such as microfinance, community-driven development, and conflict. The final part of the course builds upon the time-series lectures in 3203 and covers a number of time series techniques that are frequently applied to the dynamic modelling of relationships between macroeconomic variables as well as the short- and long-run behaviour of individual macro-variables.

ISS-4334 Politics and the Economics of Natural Resource Management

Code	ISS-4334
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Lorenzo Pellegrini
Lecturers	Lorenzo Pellegrini
Teaching Methods	Participatory Lecture, Presentation
Modes of Assessment	Assignment (Essay): 40%, Group Assignment: 10%, Written Exam: 50%
Course Administration	TLST

Learning objectives

In this course, students will develop a critical appreciation of how economics, politics, power, and perceptions shape the resource management solutions we propose and advocate, and how contextual factors affect the functioning of policy instruments and management structures. After finishing the course, students will be able to identify key challenges and concerns in applying different management approaches and their associated policy instruments in different contexts.

Course description

The course is organized in four blocks.

- The first block provides an introduction to concepts central to the course and to resource management more generally.
- The second block focuses on natural resource systems, including protected areas, their sensitivity and relation to human activity, the conflicts that arise from patterns of human-environment interaction and the effect of resource management patterns on rural livelihoods.
- The third block moves on to the policy and institutional environment in which natural resources are managed. Three broad categories of policy instruments are considered – “command and control” measures or direct regulation, economic instruments, and community management approaches.
- The fourth block discusses some specific resources to highlight the issues discussed in the previous blocks, but from a resource perspective. This is important as different resources require different policy and management frameworks.

ISS-4335 Politics of Agrarian Transformation

Code	ISS-4335
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Jun Borrás
Lecturer	Jun Borrás
Teaching Methods	Participatory Lecture, Tutorials
Modes of Assessment	Assignment 1 (Take Home Essay): 30%, Assignment 2 (Essay): 60%, Group Assignment: 10%
Course Administration	TLST

Learning objectives

The course is designed both for AFES MA participants and for others whose research interests focus on the politics of rural and rural-related development. The course aims to strengthen your capacity for critical analysis of the dynamics of social and political change in rural societies. You will become familiar with key competing theoretical tools relevant in understanding the *politics* of agrarian transformations, with an emphasis on the role of the state and of non-state actors: NGOs and (trans)national rural social movements, and their alternatives, e.g. 'food sovereignty'. On completion of the course you will have gained confidence in the critical analysis of the *politics* of agrarian transformations seen from the inter-connected local, national and international levels, including the identification and use of appropriate conceptual frames for your own research.

Course description

Rural economies are both growing and stagnant, becoming relatively less agricultural ('de-agrarianisation'), less self-contained ('globalization'), less static (social economic differentiation and geographical mobility). While the central state remains a key actor in development processes, its role has been transformed during the past decades. Moreover rural politics have been different during the past two decades or so than the previous ones in so many ways, including: absence of rural-based revolutionary movements and the rise of contemporary (trans)national agrarian movements. These processes affirm old and generate new agrarian questions, and require old and new critical analytical approaches to understand them. But the terms, conditions, mechanisms, character, pace, direction and orientation of agrarian change do not exist in a vacuum: these are politically contested by key actors within and between state and society aimed at controlling and influencing the processes of change. Hence to a large extent these change processes are political and are embedded within pre-existing distribution of political power and power relations.

ISS-4338 Gender and Sexuality as ‘Lenses’ to Engage with Development Policy and Practice

Code	ISS-4338
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Silke Heumann
Lecturers	Wendy Harcourt, Silke Heumann, Karin Astrid Siegmann, Dubravka Žarkov
Teaching Methods	Participatory lectures, workshops, films, discussions, presentations
Modes of Assessment	Assignments: 100%
Course Administration	TLST

Learning objectives

Throughout the course, students will:

- Acquire the conceptual tools to examine how the social construction of gender, sexuality and the body is related to the (re)production of social relations of power and inequality and therefore a crucial concern of development and social justice.
- Learn how to understand and address gender and sexual diversity and inequality in different socio-cultural and political contexts, *beyond* binary constructions of male/female, heterosexual/homosexual, secular/ religious, ‘west/ non west; ‘modern’ / ‘backward’; rights/culture; agency and victimization
- Acquire the practical tools to integrate gender, sexuality and intersectionality from a social justice perspective, into their work as researchers, activists, policy makers and practitioners, in governments, civil society organizations, social movements or universities.

Course description

The aim of the course is to learn how to use gender and sexuality as ‘lenses’ through which to engage with the challenges of development policy and practice and social justice struggles, in the context of globalization. In the course we will unpack our naturalized and binary assumptions in relation to sex, gender and sexuality. We will look at gender beyond women and femininities, to explore men and masculinities as well as transgendered bodies and identities. We will look critically at the binary ways in which debates around gender and sexuality are framed in political and development debates and interventions (culture vs rights; progressive vs backward, secular vs religious) and learn to go beyond these ways of engaging with gender and sexual diversity. Throughout the course we will cover contemporary key issues in development and politics, including: men and masculinities, reproductive health and rights, sexual health, sexual diversity and rights, sex work, sexual and gender-based violence and biotechnologies.

ISS-4339 Development Management and Reforms

Code	ISS-4339
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Sunil Tankha
Lecturers	Sunil Tankha, Joop de Wit
Teaching Methods	Participatory Lecture, Workshop
Modes of Assessment	Assignment 1 (Essay): 60%, Assignment 2 (Individual Reaction Papers): 30%, Group Assignment: 10%
Course Administration	TLST

Learning objectives

1. Understand the organizational structures of public sector institutions and development agencies in relation to their objectives, and the crucial role played by them in administration and governance.
2. Understand the theories and practical dynamics of policy implementation through dynamic multi-stakeholder public processes that include public sector organizations interacting with many other societal actors.
3. Understand theories, strategies and tools of public sector and policy reform.
4. Acquire skills and tools for effective implementation in complex and often turbulent environments, relating to leadership, managing change, organizational analysis, negotiations, and public finance.

Course description

This course is about the practice of development management as conducted by public sector institutions, development cooperation agencies and other related organizations. It also focuses on policy implementation and public sector reform, especially in the delivery of public services. It relates theories of policy making and implementation to the actual dynamics of implementation in often complex institutional contexts, characterized by weak or divided or indifferent institutions and governance systems, and where budgets, capacity and/or staff commitment are sometimes problematic. Theories and empirical studies of state failure and inefficiencies are discussed and students learn about different reform strategies and tools, including administrative reform and shrinking the state. Students learn how organizations develop, maintain and change their dominant cultures, how they develop and lose competencies and responsibilities, and how they develop and execute strategies. They also learn key issues of how to manage reform and change, taking into account budgets, human resources and institutions. Different models and their relevance to developing/transitional country contexts are discussed in the course and students learn to distinguish types of implementation and their policy relevance. The course will accordingly also cover management skills such as in negotiation and leadership.

ISS-4341 Evaluation of Development Policy, Programmes and Projects

Code	ISS-4341
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Sylvia Bergh
Lecturers	Sylvia Bergh, guest lecturers
Teaching Methods	Participatory Lecture, Workshop, Study Visits
Modes of Assessment	Assignment: 60%, Group Assignment: 15%, Participation: 25%
	A minimum of 80% attendance is mandatory to receive a passing grade
Course Administration	TLST

Learning objectives

At the end of the course students will have:

- a good understanding of the significance of evaluation for policy, programme and project analysis in governments and non-governmental organizations.
- acquired skills for the application of this knowledge and insight, including an ability to design and manage evaluations of social development policy and programs.

Course description

The demand for evaluation has become large. Governments, parliaments, corporations and citizens all want to know whether programs are effective, for whom and in terms of which objectives, as well as the reasons that explain success or failure. In international cooperation, the demand has been particularly intense: funders want to know the results of the funds donated or lent, and tax payers ask if the money is well used. Evaluation studies can throw a light on these questions. The main idea running through the course is that evaluation is not a technical process that can be applied in a standard way, but that its value and usefulness are strongly related to political choices and circumstances. The course will focus on evaluation as a practice leading to action, but grounded in reflection on ideas behind the practice and on theories supporting the choice of methodology in evaluation. The course will touch upon philosophy of science and value theory, the political dimensions of evaluation, and results-based management. The course will develop practical skills, mainly through the assignment consisting of writing the Terms of Reference for an evaluation based on project documents relating to a real case. The course also includes study visits to a Dutch NGO, the Court of Audit, and/or the Inspection and Evaluation Unit of the Netherlands Ministry of Foreign Affairs.

ISS-4344 Working Out of Poverty

Code	ISS-4344
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Karin Astrid Siegmann
Lecturers	Lee Pegler, Freek Schiphorst, Karin Astrid Siegmann
Teaching Methods	Participatory Lecture (incl. Roundtable Discussion), Workshop
Modes of Assessment	Assignment 1 (Policy Brief Based on Group Assignment; or Annotated Bibliography): 35%, Assignment 2 (Essay): 45%, Group Visualization 10%; Group Presentations Social Security: 5%; Group Presentations Case Study: 5%
Course Administration	TLST

Learning objectives

After completion of the course, participants will:

- have acquired a critical understanding of scholarly and policy debates on poverty, precarious work and inclusive growth, especially the relation between them;
- be able to articulate the role of local social institutions and global economic changes for precarious work;
- be able to characterize the (often ambiguous) role of the state in the poverty-work nexus;
- be able to identify and appraise the responses of various actors to the increasing prevalence of precarious work (such as policy makers and civil society as well as precarious workers themselves).

Course description

This course is open to participants from all majors, and contributes towards the Poverty Studies (POV) specialization.

The lack of sufficient and productive employment is a major cause of poverty. At the same time, poverty often forces women and men to take up precarious types of work and employment. Globally, one in four workers lives in extreme poverty or cannot address his or her basic needs on a regular basis. The course addresses poverty and work, especially the nexus between them in the form of precariousness and policies aimed at promoting (inclusive) economic growth. It seeks to familiarise participants with the contemporary varieties and conditions of precarious work, as well as with the economic, social and political factors that have contributed to its emergence and reproduction. The course highlights the role of geographic dispersion of production of goods and services in global value chains (GVCs) as a crucial determinant of precarious work. These global processes take place alongside and interact with the reproduction of precariousness through workers' social categorization on the basis of, e.g., their gender, ethnicity, migratory status. The State has an ambiguous role to play in these dynamics. While state-led marketisation has contributed to the rise of precariousness, the state also intervenes to support and protect precarious workers. Besides such policy responses, precarious workers' collective efforts to 'work themselves out of poverty' will be analysed. The course strongly relies on participatory forms of learning, for instance, through group work, role play and interactions with practitioners during a field visit as well as panel discussions.

ISS-4348 Human Behavior and Experiments in Development

Code	ISS-4348
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Matthias Rieger
Lecturer	Matthias Rieger
Teaching Methods	Lectures, case studies, in-class experiments
Modes of Assessment	Assignment 1: 45%, Assignment 2: 40%, Group Assignment: 15%
Course Administration	TLST

Learning objectives

1. Understand the behavioral foundations of development
2. Discuss how experiments can be used to measure behavior in development studies
3. Differentiate types of experiments in the lab and field
4. Acquire first practical skills and knowledge on how to run and apply experiments in the field.

Course description

If we want to study development, we ultimately need to understand how people and groups in developing countries **behave**. To this end, behavioral experiments and games are now applied across many disciplines ranging from psychology, anthropology, sociology, political science as well as economics. Such experiments are particularly powerful for sensitive research topics. For example, experiments can be used to reveal the behavioral implications of civil war, social discrimination or corruption. Experiments are also useful to study and test behavioral anomalies in the spirit of Nobel Prize winner and psychologist Daniel Kahneman (e.g. endowment effects, loss aversion, and anchoring).

Overall, the course centers around three main questions: *What are the behavioral foundations of development? How can we measure behavior using experiments? How does one design and run lab and field experiments in practice?* The course comes in three parts: the first part reviews the behavioral foundations of humans and development. The second part surveys and reviews standard lab (e.g. trust, public good, risk, discount games) and field games. The third, more practical part of the course, focuses on how to tailor and implement experimental protocols in the field.

Prerequisites

This course is open to all majors. The course requires no prior background and is non-technical.

ISS-4349 Social Movements and Civic Innovation

Code	ISS-4349
Weight of the Course	8 ECTS
Period	TERM 3
Course Leader	Kees Biekart
Lecturers	Kees Biekart, Silke Heumann, Helen Hintjens, Rosalba Icaza, Rachel Kurian, Wendy Harcourt, Peter Knorringa
Teaching Methods	Participatory Lecture, Workshop, Study visit
Modes of Assessment	Assignment (Essay): 75%, (Individual) Presentation: 15%, Participation: 10%
Course Administration	TLST

Learning objectives

At the end of the course, participants will be able to articulate the changing role of social movements in the framework of new approaches to social transformation, such as 'civic innovation'. In particular the students will be able to:

- Identify the various conceptual approaches to civic innovation, and how these are used in different contexts and by various stakeholders;
- Understand the critical approaches to social movement theories, as well as approaches to civic action, civic-driven change and civic innovation;
- Assess strategies of civic actors dealing with processes of power and social change in multiple societal sectors (civil society as well as in markets and governments).

Course description

Civic innovation is central to one of new research cluster at the ISS. The course focuses on the role of socio-political actors, with particular reference to social movements and civic actors. The course will start with an overview of theories and concepts to understand the characteristics of social movements and civic innovation, and the dynamics of civic-driven change. The second part of the course examines the dynamics of civic innovation in relation to markets and alternative economies, such as solidarity economies, social entrepreneurship, and fair trade movements. The third part looks at civic innovation in relation to body politics, knowledges, and feminist movements: The key ideas and concepts of civic innovation are discussed and examples are provided on how civic innovation offers an inspiring new lens to analyse social change as well as civic energy from the perspective of politics, markets, and sexuality.

The course is interactive with workshops and class discussions. The course also includes visits to Dutch activist groups, social movement organizations and civil society actors, in order to discuss the issues raised in the course also with local professionals and practitioners. In previous years, students taking this course have been actively engaged in processes of social change and civic action, even though this is not a condition to participate in the course.

ISS-5401 Research Paper

Code	ISS-5401
Modes of Assessment	27 ECTS (including 4 EC of ISS-3105: Research Paper Preparation)
Period	TERM 4
Teaching Methods	Consultations with Supervisor, a Second Examiner and Fellow Students plus Course ISS-3105 Presentation and Workshops
Modes of Assessment	Research Paper: 100%
Course Administration	TLST

Learning objectives

With the Research Paper (RP) the student demonstrates the capacity to:

- identify a research topic;
- formulate research questions;
- undertake a literature study on the theoretical perspectives relevant to the research questions;
- collect relevant data and material;
- choose an adequate method to research the problem;
- apply that method adequately;
- draw a clearly stated conclusion from the research;
- support that conclusion with a systematically presented report containing a logical argument based on sufficient empirical and/or theoretical evidence.

Course description

To complete the requirements of the MA Programme, students write a Research Paper (RP). The RP must focus on issues related to the Major for which the student is registered. If the student wishes to specialize in a certain area, the Supervisor and the second reader should confirm that the RP addresses an issue, problem or question within the theme of the specialization. The Research Paper carries a weight of 27 ECTS. The final result of the MA Exam will be based for 60% on the average grade for course work and for 40% on the Research Paper grade.

Work on the Research Paper starts with the formulation of a research topic, during Terms I and II, elaborated in an RP Proposal. Preparatory workshops are organized within the context of the course ISS-3105 (Research Paper Preparation). A "Research Paper Handbook" will be handed out in Term 1.

Research Paper Design seminars in Term 2 (May 2017) will assist students in preparing a Research Design. The Research Paper Design needs to provide an argued statement of a researchable question or problem; and an appropriate methodology to investigate this question or problem. In methodological terms, the Research Design should indicate all the choices the student has made: scope and limits of the research work, the main concepts that are considered; the theories which relate to those concepts; the research questions (and where possible hypotheses) put forward; the data requirements; the analytical tools to be used; an indication of the possible results, and an indicative work plan. Moreover, a Research Paper Design also serves a more formal purpose, as it contains the student's commitment to a particular research undertaking, which is discussed and agreed upon by the Supervisor and the Second Examiner, and it is the assessment of the RP Preparation course (3105).

There will be a further opportunity to formally review progress with the Second Examiner and fellow students at the RP Draft seminars in September 2017.

Methods to support

The Supervisor assists the student through all stages of the development of the research. Preparatory meetings are scheduled, as well as Research Paper Seminars. Supervisors are required to advise and comment on the Research Paper Design, the implementation and the writing of the Research Paper. The Second Reader, who has no supervisory role or duties, is required to comment on the Research Paper Design and on the first draft, and to act as a second examiner. The comments on design and first draft are channelled through or given in the presence of the Supervisor. The student and the Supervisor schedule meetings to which both should adhere.

The Supervisor advises specifically on:

- the formulation of a researchable research question/problem;
- the design of the general structure of the Research Paper;
- the development of the theoretical and conceptual framework, including indicating relevant literature for this framework;
- the empirical material necessary for the Research Paper;
- the analysis of the empirical material in the framework of the theory used.

A template for the lay-out of the Research Paper is available in a digital format.

Assessment

- The final version of the Research Paper must be submitted electronically.
- The Research paper will only be marked if the final average mark for all course work is at least 60.
- The Research Paper must remain within the maximum of 17,500 words, including footnotes and endnotes, excluding 1) references and bibliography, 2) annexes which reproduce essential documents, such as a questionnaire, a document which has been analysed in depth, a key document in another language, 3) preface, acknowledgements and table of contents.
- The criteria for marking and grading of the Research Papers are written down in the Regulations on Teaching and Assessment for the MA 2016-2017.
- It must be noted that, due to the time needed for marking and grading the Research Papers, only students submitting their Research Papers on time can guarantee to graduate on the official graduation ceremony in December.
- There is an appeal procedure described in the Regulations on Teaching and Assessment.

ISS-8401 Internship

Code	ISS-8401
Weight of the Course	4 ECTS
Teaching Methods	Internship
Modes of Assessment	Assignment: 100%
Course Administration	Wieke Blaauw

Internships will take place in a relevant organization of the students' choice, such as think tanks, international organizations, national and international NGOs, professional bodies, government agencies and embassies, or research organizations. The student is responsible for identifying a host organization, to establish a contact and to arrange for the internship.

A formal contract has to be signed by the student, the hosting organization and the ISS. The format for this contract can be obtained from Wieke Blaauw.

Learning objectives

- Combine and apply the knowledge obtained in previous work and during the Masters programme in an assignment for a hosting organization
- Obtain insights in the mission and policy of the hosting organization and in the ways of working and networks of a donor organization.
- Learn to report on the assigned task in a concise report.

Course description

The internship is focused on hands-on work in an organization in order to get work experience, to acquire new networking contacts, and to apply lessons to practice. The internship organization will have to be identified by the student, and is to be carried out in the period April - June on a part time basis (e.g. 2 days a week). The exact task description depends on the request from the hosting organization. Work that could typically be done by an intern is a baseline survey, an inventory and first analysis of data, a comparative analysis of findings of different evaluations, a literature study for policy preparation, or preparatory study for lobby and advocacy.

Supervision will be provided by ISS staff and is equally expected from the side of the hosting organization. At the end of the period the student has to write a short report for ISS and the hosting organization.

Assessment

The student is expected to provide a report of around 2,000 words on the internship experience. In addition, the host organizations will report back in writing to the ISS supervisor and/or course leader. The internship is assessed on a pass/fail basis.

ISS-9102 Academic Skills

Code	ISS-9102
Weight of the Course	2 ECTS
Period	TERM 1 – TERM 2
Course Leader	Peter Bardoel
Lecturer	Peter Bardoel
Teaching Methods	Theme Lecture, Participatory Lecture
Modes of Assessment	Attendance: 100%
Course Administration	TLST

Learning objective

At the end of the course, students will:

1. be able to apply standards of Academic Integrity in their submitted work. Students will practise correct referencing and paraphrasing. They will be fully aware of the academic standards and of the consequences of not applying these standards correctly;
2. have acquired a wide range of academic skills (that build competence and confidence), practised with subject material from the parallel course *2101-The Making of Development*. Skills;
3. have acquired key aspects of successful essay writing, notably weaving viewpoints from academic sources into one's own argument in one's own essays, while correctly citing and paraphrasing;
4. develop competence in the triangle "reading-writing-thinking" and learn to develop and adapt reading strategies to cope with the reading tasks at ISS.

Course description

Academic Skills make sense once they are embedded into content courses. Hence, skills are illustrated and practised with material from the parallel course *2101-The Making of Development*. required readings are shared.

The *9102-Academic Skills* sessions are organised as 'theme lectures' addressing a specific theme, which is aligned with the subject matter of the general course 2101. These theme lectures are a combination of teacher-fronted delivery and active student participation.

Course ISS-9102 has two tracks: a short track and a long track. You choose yourself which track to follow, but here is some guidance.

The Short Track has two sessions only: a 'needs assessment' (first session) and a session on Academic Integrity, correct referencing and information on the proper-referencing test.

If students want to stop after session 2, then they must have passed the proper-referencing test beforehand.

The Long Track runs throughout term 1 and term 2. It starts with the same two sessions as the Short Track does. From session 3 onwards it provides a range of academic skills at the hand of readings from the parallel course, *2101-The Making of Development*. It embeds academic skills within texts from Development Studies. It is taught with a variety in methods of delivery and features active student participation.

Assessments: Proper-referencing test

Course ISS-9102 is open to all MA students at ISS because every student has to pass the *Proper-referencing test* before 31st December 2016. The test is offered on a pass/fail basis and can be taken repeatedly. Should a student not have passed by 31st December, s/he has an (exit) interview with the Convenor of his/her Major.

ISS reserves the right to expel students from the MA Programme who have consistently failed this test before 31st December 2016, or who have violated the principles and practices of academic integrity.

Required reading

This course uses texts from the parallel course *ISS-2101*. For each session, you will be mailed which text to bring to class.

ISS-9103 Remedial Quantitative Skills for Development Studies

Code	ISS-9103
Weight of the Course	2 ECTS
Period	TERM 1
Course Leader	Peter van Bergeijk
Lecturer	Peter van Bergeijk
Teaching Methods	Participatory Lecture, Computer Exercises
Modes of Assessment	Written Exam (Multiple Choice Exam): 100%
Course Administration	TLST

Learning objectives

At the end of the remedial you will be able to avoid common basic mistakes and to critically read and constructively produce tables and graphs. You will understand index numbers, (weighted) averages, mean, median and mode, growth rates, percentages, frequency distributions and logarithms and exponentials. Lectures have been taped in order to facilitate e-learning.

Introduction to the course

Everybody knows that language is important. Many, however, seem to forget that numbers are actually as important as words. Indeed, you cannot read or write academic studies and government reports unless you know what the numbers mean and understand the story that the numbers tell. This course provides numerical skills for development studies. Teaching is based on real life case studies (including: missing girls, income distribution, global poor and LDCs, globalization and transportation costs, child death, prices for staples, family size and life expectancy, use of mobile phones, reliability of statistics) and examples drawn from Egypt, India, Italy, Kenya, Surinam, Vietnam, United States you will actually learn to see how numbers are used and abused. The course will provide you with tools that protect students against numerical manipulation. It will also provide you with the tools to make good use of numbers. Finally, you will discover that numbers are fun.

Assessments

Students who fail the diagnostic quantitative skills test are required to take this course. They have to redo the test at the end of this course. If they fail again they get a take home exam that should help them to acquire the required skills.

ISS-9104 Academic Writing Skills

Code	ISS-9104
Weight of the Course	5 ECTS
Period	TERM 1 – TERM 3
Course Leader	Almas Mahmud
Lecturer	Almas Mahmud
Teaching Methods	Participatory Lecture, Tutorial, Workshop
Modes of Assessment	Attendance: 100%
Course Administration	TLST

Learning objective

Students at ISS could face challenges in communication skills when they undertake a study in a language other than L1 (mother tongue). For instance, writing in an academic style with correct use of language, structure, coherence and referencing – according to ISS guideline.

However, this tailor-made course enables you to acquire the right skills in writing for academic purposes.

Course description

Keeping in view the cultural challenges that international students face, the course takes a holistic approach to meet the needs of a diverse group of students.

1. 9104 covers different aspects of writing skills, including grammar in context to show how grammar creates meaning.
2. In addition, students learn about academic writing conventions. The appropriate use of paraphrasing and summarizing shows how to avoid the pitfalls of plagiarism. Students are guided towards rules of referencing, following the ISS-Harvard style- which is essential.
3. Different topics relating to style of writing enables students to explore ways to achieve effective academic writing skills both for a well –structured essay and the Research Paper.

Teaching Methods

Different teaching methods are used along with teacher feedback to encourage the writing process. The course is held twice a week, and students can choose to attend either one of the two sessions.

Who can join?

ISS conducts a Diagnostic Test which identifies students who require further support to improve their writing skills. If shortlisted, it is obligatory for you to attend the course as it is in your best interest to improve your writing skills for the Research paper.

Moreover, students who would like to refresh certain aspects of writing for academic purposes can also join the course after discussing it with the course leader and provided there is space in class.

ISS-9105 Advanced Writing Skills

Code	ISS-9105
Weight of the Course	5 ECTS
Period	TERM 1 – TERM 2
Course Leader	Almas Mahmud
Lecturer	Almas Mahmud
Teaching Methods	Participatory Lecture, Tutorial, Workshop
Modes of Assessment	Attendance: 100%
Course Administration	TLST

Learning objectives

The tailor-made course facilitates writing practice by focusing further in language acquisition through studying grammar in context and improving on syntax and sentence structure.

Course description

The course is designed to meet the language requirement of Indonesian students, in particular those doing the Double Degree program. Other students who need to revisit grammar in context can also join, provided there is space and after consulting the course leader. Students need to refer to *English Grammar in Use*, R.Murphy, and *Advanced Grammar in Use* M.Hewings. The grammar books can be borrowed from ISS library. Work assigned must be completed before every session and a file maintained on work done.

This course is held in Term1 and attendance is obligatory. Students who need to work further will continue to work in small groups in Term 2.

ISS-9106 Information Technology Skills

Code	ISS-9106
Weight of the Course	1.5 ECTS
Period	TERM 1
Course Leader	John Steenwinkel
Lecturers	John Steenwinkel, tba
Teaching Methods	Participatory Lecture, Computer Exercise
Modes of Assessment	ECDL Test; students need to obtain a score of 75% or over
Course Administration	TLST

Learning objectives

EUR offers an information and IT “rich” learning environment. Students are expected to make use of presentation software, write essays electronically, use spreadsheets, make use of the Electronic Learning Platform (Moodle), consult apps for information, timetable and grades; they need to communicate effectively by email and social media. A student is expected to be familiar with safety measures and apply them. As our learning and research environment changes constantly and makes us more dependent, competency in IT skills is essential. The objective of the course is to ensure that students have sufficient IT-skills to learn unhindered, to write their research paper and to make effective use of the available electronic learning environment.

Course description

To assess their IT skills, students are required to do a diagnostic test at the start of the year. This test is provided by ECDL, the European Computer Driving License and results in a score and offers details on missed questions. Topics covered are: Security, Ms Word, Ms Excel, Ms PowerPoint, MS Outlook & Internet Explorer.

For students who attain a pass (score of 75% or over) in the first attempt, the initial test is also the final test. For those who do not succeed, the test results provide incorrect answered questions. Instruction material is available in the library to improve on missed topics. Links to online learning materials are available in Moodle. After studying the remedial material, the student may re-do the ECDL diagnostic test later in term 1. Ultimately by November 3th 2016, a pass is required to qualify for Term 2.

In October/November a number of Excel workshops will be organized to help with basic problems. Admittance to some courses (economics and mixed research techniques) is dependent on a pass in the ECDL Excel test. Ultimately by November 14th 2016, a pass is required for those students who want to participate these Term 2 courses.

ISS-9120 Mathematics for Economists (ECD)

Code	ISS-9120
Weight of the Course	1.5 ECTS
Period	TERM 1
Course Leader	Luca Tasciotti
Lecturer	Luca Tasciotti
Teaching Methods	Lecture
Modes of Assessment	Attendance: 100%
Course Administration	TLST

Learning objectives

The aim of the course is to try to refresh the participants' knowledge of a number of important mathematical concepts and applications frequently used in economics.

Course description

The course reviews elements of algebraic manipulation and matrix algebra, to provide the mathematical foundation for subsequent courses, in particular the courses on microeconomics and macroeconomics. The topics covered are: functional forms; structural and reduced form equations; matrix notation and basic matrix operations; solution of a system of equations; techniques of differentiation; unconstrained and constrained optimisation. Applications to both micro and macro issues are discussed. Examples will focus on profit maximisation and cost minimisation of firms, utility maximisation of consumers and solving a model of supply and demand by substitution or by using matrix algebra.

ISS-9130 Intermediate Microeconomics for Development Economics

Code	ISS-9130
Weight of the Course	1.5 ECTS
Period	TERM 1
Course Leader	Matthias Rieger
Lecturer	Matthias Rieger
Teaching Methods	Participatory Lecture, Class Room Experiments, Exercises
Modes of Assessment	Attendance: 100%
Course Administration	TLST

Learning objectives

You will learn the basic micro economic concepts and tools at the intermediate level that are required in development studies.

The aim of the course is to refresh student's knowledge in the area of micro-economics at the intermediate level. The focus is on theory and its application to real world problems. The first aim is to ensure that students have the required microeconomics background for subsequent courses, in particular for 'Development Economics' (ISS-1107) and 'Foundations of Economic Development' (ISS-4141). The second aim is to provide a link to competition policy issues that are becoming increasingly relevant for developing countries and developing countries.

Course description

This course provides a review of selected micro-economic topics at the intermediate level. All theoretical concepts are illustrated using case studies and class room experiments. Lecture 1 General introduction and consumer theory (rationality, constraint, (marginal) utility, maximisation, preferences, Giffen good, (non)convexity, derivation of demand), marginal rate of substitution. Gossen's Law', consumer demand (linear and non linear demand), Lagrange multiplier). Case study: Giffen good. Class room experiment: aggregate demand and consumer surplus. Lecture 2 Elasticity, Slutski's identity and topics in demand estimation (income and substitution effect, normal, luxury and inferior goods, substitutes and complements, simultaneity, functional form). Case study rural electrification.

Lecture 3 Technological Constraints: The Firm (production function, isoquants, variable, fixed, marginal and average costs, profit maximization, isoprofit functions, derivation of the supply curve). Case study: international price discrimination (pharmaceuticals)

Lecture 4 Market Equilibrium and Market Failures (classification of markets, equilibrium, excess demand/supply, rationing, short side rule, cycles, cobb web diagram, derivation of supply function from cost functions, market failures, monopoly versus free competition, Harberger triangle welfare analysis) Case study: residual demand (OPEC).

ISS-9150 Earth Economics: Macroeconomics and Growth in the Closed Economy

Code	ISS-9150
Weight of the Course	1.5 ECTS
Period	TERM 1
Course Leader	Peter van Bergeijk
Lecturer	Peter van Bergeijk
Teaching Methods	(Participatory) Lectures, Computer Exercises
Modes of Assessment	Attendance: 100%, self-assessment
Course Administration	TLST

Learning objectives

This is a refresher course if you have not studied macroeconomics, did so some time ago or did not study economics in the English language. At the end of the course you will be able to identify gaps in your knowledge and have learned that this can be remedied using the text book that provides both exercises and answers and an index to key items.

You will be introduced to major international data sources and at the end of the course will have hands on experience in finding and getting macroeconomic data. You will have a basic understanding of the closed economy concept that underlies Earth Economics as a new development studies lens to analyse current global macroeconomic issues including the recent financial and economic crisis.

Course description

The course features (participatory) lectures and hands-on computer exercises and introduces basic concepts and solutions (both elementary maths and graphs), using the most recent real world data derived from major data sources of IMF, UNCTAD, World Bank, OECD and ILO.

Plant Accounting and Business Cycle Fluctuations.

Topics: the economic process; flows of product/income; intermediate/final output; final expenditure; primary factor incomes; value added; equivalence of concepts; alternative formulations of the product/income aggregates; market prices versus factor cost; gross versus net; current price versus constant price, grey economy, Gross Planet Product, alternatives to GPP, business cycle, great moderation, great recession, inflation, index numbers, unemployment, static and dynamic view on Okun's Law.

Using both graphical and mathematical approaches, the standard Solow growth model and the basic ISLM model that describes product and money markets will be used to discuss (dis)equilibrium and adjustment processes over the long and short run.

ISLM Topics: consumption, investment, depreciation, saving, capital, fallacy of composition, saving paradox, multiplier, equilibrium concepts, product market equilibrium, exogenous/endogenous, reduced form, alternative derivations of IS/LM curves, policy mix, progressive/proportional taxation, average versus marginal, debt dynamics, fiscal policy, income distribution, monetary aggregates, money market equilibrium, Say's Law, bonds, transaction, precautionary and speculative money demand, Fisher's velocity equation, monetary policy, quantitative easing, comparative statics, reserves, elasticity, liquidity trap, demand side equilibrium.

Solow growth model

Topics: isoquant, Harrod-Domar/Solow production function, productivity, development, capital widening, capital deepening, saving rate, population growth, steady state, time path, transition phase, growth accounting, poverty trap, long wave, Kondratieff, secular stagnation.
